KEY PROJECT INFORMATION

GS ID of Project	GS 12570
Title of Project	Building a Sustainable Development World: Cookstove Distribution Program
Time of First Submission Date	14/08/2024
Date of Design Certification	02/11/2024
Version number of the PDD	1.5
Completion date of version	19/02/2025
Project Developer	IICARE Foundation
Project Representative	Infinite Environmental Solutions Limited
Project Participants and any communities involved	NA
Host Country (ies)	India
Activity Requirements applied	☒ Community Service Activity ☐ Renewable Energy ☐ Land-Use and Forests Activity Requirements/Risks & Capacities ☐ N/A
Scale of the project activity	☐ Micro scale ☒ Small Scale ☐ Large Scale
Other Requirements applied	Principle and requirements version 1.2
Methodology (ies) applied and version number	Reduced Emission from Cooking and Heating: Technologies and Practices to Displace Decentralized Thermal Energy Consumption (TPDDTEC) Version Number- 04.0 ²
Product Requirements applied	☒ GHG Emissions Reduction & Sequestration ☐ Renewable Energy Label ☐ N/A
Project Cycle:	☐ Regular ☒ Retroactive

Table 1 – Estimated Sustainable Development Contributions

SUSTAINABLE DEVELOPMENT GOALS TARGETED	SDG IMPACT (DEFINED IN B.6)	ESTIMATED ANNUAL AVERAGE	UNITS OR PRODUCTS
13 Climate Action (mandatory)	13.2.2 Total Greenhouse Gas emissions per year	36,220	tCO ₂ e/annum
SDG 1 No Poverty	1.4.1 Proportion of population living in household with access to basic services	15,500	Number
SDG 3: Good Health and Well Being	3.9.1: Mortality rate attributed to household and ambient air pollution	100%	People claiming decrease in household smoke (%)
SDG 4: Quality Education	4.4.1 Proportion of youth and adults with information and communications technology (ICT) skills, by type of skill.	50	Number of people get trained
SDG 5: Gender Equality	5.4.1: Proportion of time spent on unpaid domestic and care work, by sex, age and location	100%	Households claiming time savings
SDG 7: Affordable and clean Energy.	7.1.2 Proportion of population with Primary reliance on clean fuels and technology	15,500	Number of project households using improved cookstove
SDG 8: Decent Work and Economic Growth	8.3.1: proportion of informal employment in total employment, by sector and sex	50	Number

	15.2.1 Progress towards sustainable forest management.		
SDG 15: Life on Land	Savings of fuelwood for cooking purpose by the project activity.	30,509	tonne/annum

SECTION A. DESCRIPTION OF PROJECT

A.1 Purpose and general description of project

>> This project aims to reduce the use of the firewood, hence, the carbon emission that leads to improvement in the indoor air quality. This project activity is developed in Maharashtra state of India, but further the distribution will be taken in the different states of India. The project is located within the project boundary of host country India. The households in the rural villages of Maharashtra state mostly rely on the traditional mudstoves and also some of the households use three stone open fire with firewood as a fuel for their cooking needs. The improved cookstove reduces the consumption of firewood for cooking and reducing the smoke in the environment.

The project activity is eligible under the methodology of TPDDTEC (Technologies and the Practices to Displace Decentralized Thermal Energy Consumption) Version 4.0. The project is implemented by IICARE Foundation that involves the activity of distribution of 15,500 Improved Cookstove (ICS) in rural households. The project boundary is considered the physical boundary of the host country India.

The practice of cooking on traditional cookstoves in rural villages was found to be the baseline scenario of the project that poses significant health and environmental risks that can also be avoided by distributing access to fuel-efficient cookstoves. Among the community by distributing these improved cookstoves, the project aims to provide communities with various different benefits, including poverty reduction, improvement in health, increased productivity, and also to mitigate climate change. These cookstoves can help in improving the health of women, children, and other household members. Besides mitigating climate change by reducing CO₂ emissions from the project, this project will deliver numerous benefits to local communities and environment including:

1. Reducing the rate of deforestation and degradation of surrounding forests due to decreased fuel wood consumption for cooking purposes.
2. Minimizing soil erosion and nutrient loss as the trees serve as natural protectors of the land.
3. Decreasing the poverty by lowering annual expenses on cooking fuels through the adopting the use of improved cookstoves.
4. By improving the public health by reducing the adverse effects of smoke inhalation caused by traditional cooking methods.especially to the women and the children.
5. By saving the time in cooking and also the wood and by providing individuals with more opportunities to engage in essential household tasks and/or supervise children.

This project includes distribution of 15,500 improved cookstoves at subsidized price of Rs 325. This subsidized price structure carefully designed to balance affordability for the end users and ensure the financial sustainability of the project, with that there were also some of the households who received the cookstove at the free of cost depending on the financial condition of the beneficiary, Moreover the project aligns with several Sustainable Development Goals, including and covering the SDG-1 No Poverty, SDG-3: Good Health and Well Being, SDG-4 Quality Education, SDG-5: Gender Equality, SDG-7: Affordable and Clean Energy, SDG-8: Decent Work and Economic Growth, SDG-13: Climate Action, and SDG-15: Life on Land.

Operational & Management Structure

IICARE Foundation is Managing Entity for this project. IICARE Foundation is managing and the implementor entity for this project IICARE Foundation is the NGO that through different projects focusing on environment conservation,healthcare improvementand also making the meaningful impact in the lives of communities in need.

Furthermore, team's ground agents is a driving force behind the mission., these members play an integral role in distributing the products and sharing the benefits of clean energy solutions. Their efforts not only help us reach households but also create economic opportunities within local communities.

A.1.1. Eligibility of the project under Gold Standard

>> As per paragraph 4.1.3 of GS4GG the Principles and Requirements – Version v.1.2.
" Project type is automatically eligible for Gold Standard Certification if there are Gold

Standard published Activity Requirements and/or Gold Standard Approved Methodologies associated with it or as referenced in Gold Standard Product Requirements”.

The project falls under GS4GG Community Services Activity Requirements version 1.2 and uses the methodology Reduced emissions from cooking and heating – Technologies and Practices to displace Decentralised Thermal Energy Consumption (TPDDTEC) version 04.0 for the determination of the emission reductions.

Eligibility criteria according to the section 3 of Principle and Requirements version 1.2 section is described as follows:

Eligibility Criteria Category	Eligibility Criterion – Required Condition	Justification
Types of Project	Eligible projects shall include physical action/implementation on the ground. Pre-identified eligible project types are identified in the Eligibility Principles and Requirements section.	The project activity involves installation of 15,500 improved cookstoves (ICS) in rural places of Maharashtra. The efficiency of the improved cookstove is 36.42% The project applies GS approved “Reduced Emissions from Cooking and Heating: technologies and Practices to Displace Decentralized Thermal Energy Consumption (TPDDTEC) version 04.0” impact quantification methodology. Hence, as per the GS4GG Principles and Requirements version 1.2 section 4.1.3, the project becomes eligible.

Location of project	Projects may be located in any part of the world	The project developer is dritubting cookstove in the project boundary of Hoost country India. Kindly refer to section A.2 for further information.
Project Area, Project Boundary and Scale	Project Area and Boundary shall be defined in line with the applicable Impact Quantification Methodologies and Product Requirements. The definition of scale is the same for all Projects, except Microscale which is defined as: (a) CSA Project issuing emission reductions less than or equal to 10,000 tCO₂eq per annum (b) CSA Project seeking any Gold Standard Certified Impact or Product other than emission reductions and meeting one of the following criteria: • Installed capacity less than equal to 2 MWel /6 MWth that employs renewable energy as the primary technology • Energy savings at a scale of no more than 20 GWh per year where energy efficiency is the primary activity • Achieve GHG emissions reductions at a scale of no more than 20,000 tCO₂eq per annum where project activity type is not included in the above two criteria. For the purpose of applying UNFCCC methodologies for quantification of GHG reductions, 'small scale' is defined as in CDM Modalities and Procedures for three projects types;	The project area and boundary is considered as the host country India. The distribution of the improved cookstove has been started in Maharshttra state of the host country India. Further it could be scale up to other states of India. The scale of the project is small scale and according to the GHG Emission Reductions And Sequestration Product Requirements version 2.3 section 9, Type 2: End use energy efficiency project requirement: the project is saving 131.83GWh_{thermal} (th) per year savings, that is less than the cap value of 180 GWh (th). Therefore the project is a small scale project activity

	Renewable Energy, Energy Efficiency and Others. Please refer to the GHG Emission Reductions and Sequestration Product Requirements for more information on the definition of 'small scale'.	
Host Country Requirements	Projects Shall be in compliance with applicable Host Country's legal, environmental, ecological and social regulations.	The project activity follows the social wellbeing, Environmental wellbeing, Economic wellbeing and Technological wellbeing. Projects is in compliance with India's legal, environmental, ecological and social regulations. It may be however be mentioned that the project is a voluntary initiative by the project developer and does not require any approval from the host country nor there are any specific legal requirements that the project has to follow.
Contact Details	As part of the Project Documentation the Project Developer shall provide (i) name and (ii) contact details of all Project Participants; AND in case of an organisation (iii) the legal registration details and (iv) documentation by the governing jurisdiction that proves that the entity	Project : IICARE Foundation Name of the contact person: Dr Santosh Bhosale Email: advisoradt@gmail.com Further details of the CME is provided in the Appendix 2 -

	is in good standing (defined as being a legal or other appropriate entity registered in or allowed to operate within the required jurisdiction and with no evidence of insolvency or legal/criminal notices placed against it or any of its Directors). Gold Standard retains the right (at its own discretion) to refuse use of the Standard where reputational concerns are highlighted.	Contact information of project developer(s) of this document.
Legal Ownership	Full and uncontested legal ownership of any Products that are generated under Gold Standard Certification, (for example carbon credits) shall be demonstrated. Where such ownership is transferred from project beneficiaries this must be demonstrated transparently and with full, prior and informed consent.	The Project implements a clear and transparent mechanism to demonstrate full and uncontested legal ownership of carbon credits that are generated under Gold Standard Certification. End users receiving the Improved Cookstoves under the Project activity transfer their rights to claim and own emission reductions under the Gold Standard to the Project developer. The same is the discussion point during the stakeholder consultations and stakeholder Feedback rounds.
Other Rights	As well as legal title and ownership, the Project Developer shall also demonstrate where required uncontested legal rights and/or permissions concerning changes in	The project activity involves the distribution of the improved cookstoves to the rural areas under the project boundary. The project

	use of other resources required to service the Project (for example, access rights, water rights etc.). Any known disputes or contested rights must be declared immediately to Gold Standard by the Project Developer and resolved prior to further project implementation in affected areas	activity does not lead to change in use of other resources such as land or water or natural resources hence legal rights or permission concerning use of other resources is not required.
Official Development Assistance (ODA) Declaration:	All Project Developers applying for project activities located in a country named by the OECD Development Assistance Committee's ODA recipient list and seeking Gold Standard Certification for carbon credits shall declare the Official Development Assistance (ODA) support. The Project Developer shall follow the GHG Emissions Reduction & Sequestration Product Requirements and submit the declaration at the time of Design Certification.	There is no use of ODA fund for the development of the project. The CME has provided ODA declaration conforming the same.

General Eligibility Criteria as per GS4GG community Service Activity Requirements version 1.2¹

NO.	ELIGIBILITY CRITERION	DESCRIPTION/ REQUIRED CONDITION	Justification for the Project activity
1	Type of Project	Pre-identified CSA project types are noted below. Project Developers may submit new project types to Gold Standard for approval following the Principles & Requirements	The Project activity results in reduction of baseline energy requirements, without

¹ Section 3: General Eligibility Criteria of the Community Service Activity Requirements
<https://globalgoals.goldstandard.org/201-ar-community-services-activity-requirements/>

		(a) Renewable energy: Renewable energy types such as solar (photovoltaic and solar thermal electricity generation), tidal/wave, wind, hydropower, geothermal, waste to energy and renewable biomass that are connected to mini grid³ or off grid solutions for targeted users and/or applications. • Renewable projects supplying electricity to a national or a regional grid shall refer to Gold Standard Renewable Energy Activity Requirements. • Additional eligibility criteria for specific projects (e.g. Hydropower, biomass resources, etc.), are prescribed in Annex A of this document. (b) End-use energy efficiency: Project activities that reduce energy requirements as compared to baseline scenario without affecting the level and quality of services or products, where the end-user of the products and services are clearly identified and when the physical intervention is required at the user end. For example, efficient cooking, heating, lighting, etc. (c) Waste management and handling: All waste management activities that deliver energy or a usable product with sustainable development benefits such as composting, biogas etc. (d) Water, sanitation and hygiene (WASH): WASH activities contributing to climate change mitigation and/or adaptation benefits.	compromising the quality and level of services/products, through distribution of higher energy efficient (36.42%) Improved Cookstove devices within the project area. The project is eligible for point (b) end-use energy efficiency, where improved cookstove with higher thermal efficiency are distributed for cooking purposes.
2	Project Area, boundary and scale	Project Area and Boundary shall be defined in line with the applicable	The project boundary is confined to the state of Maharashtra

		Impact Quantification Methodologies and Product Requirements.	in Host Country, India. Regarding scale, the Project activity is classified as small-scale project based on criteria related to energy savings, the total annual energy savings in the project is 131.83GWh per year, which is less than anticipated annual energy savings is of 60 GWh per year or 180 GWh thermal per year in fuel input, the Project Activity falls into the Small scale category. This classification aligns with footnote 4 of the respective methodology
3	General Eligibility Criteria	Certain Impact Quantification methodologies allow projects to account Suppressed Demand scenario when establishing a baseline. In such cases, the application of Suppressed Demand baseline is limited to Small Scale and Microscale Projects. Where a Suppressed Demand baseline is applied, it is not possible to 'stack' Gold Standard Certified Impact Statements or Products as the definition of the baseline may be contradictory.	Suppressed Demand is not used to establish the baseline of the respective project
4	Legal Ownership	(a) Projects involving the distribution of a large number of devices for services such as heating, cooking, lighting, electricity generation, water treatment technology such as water filter, etc. shall provide a clear description of the ownership of the Products that are generated under Gold Standard Certification all along	The Project developer a clear and transparent mechanism to demonstrate full and uncontested legal ownership of carbon credits that are generated under Gold Standard Certification.

the investment chain. In line with the FPIC requirement, the proofs that end-users are aware of and willing to give up their rights on Products shall be provided.	
(b) The transfer of Product ownership shall be discussed during local stakeholder consultations for projects.	End users receiving the Improved Cookstoves under the Project activity transfer their rights to claim and own emission reductions under the Gold Standard to the Project Developer of the Project activity.
	The same has been discussed and agreed upon during the stakeholder consultation.

A.1.2. Legal ownership of products generated by the project and legal rights to alter use of resources required to service the project

>>The Project Developer possesses the rightful legal claim to the emission reduction offsets that result from the operations of this Project Activity. To prevent any potential claims by other stakeholders, comprehensive safeguards are enacted. These measures take the form of well-defined categorical declarations and contractual agreements, mutually agreed upon between the Project Developer and relevant stakeholder entities. These agreements ensure the transfer of rights concerning emission reductions and other impact assets exclusively in favor of the Project Developer. This means that no other stakeholders have any legal entitlement to claim these rights.

As a crucial follow-through, the emission reduction entitlements generated by the project are formally and concretely conveyed from the beneficiary households to the project Developer. This transfer of rights is documented through a signed copy of the associated declaration forms that are an integral part of the distribution of the cookstoves.

These simple procedures emphasize our commitments to transparent, accountable, and legally sound processes throughout the project lifecycle

A.2 Location of project

>>The Project is implemented in the host country of India.. The project boundary is considered in the physical boundary of the host country India. The improved cookstoves have been distributed in districts of Aurangabad, Ahmednagar and Satara in Maharashtra.

A.3 Technologies and/or measures

>> This project involves the distribution of cookstoves within different rural places of Maharashtra in India. This fuel efficient improved cookstove has replaced the use of traditional mud cookstoves

The stove design is tailored to align with the essential requisites outlined in section A.4. Specifically, the selected model, in the project of "Eco Mini Model 04" stove, embodies the following key attributes:

- **Single Fed (Single Combustion Chamber):** Designed to optimize combustion efficiency within a single chamber, enabling optimal heat generation and minimizing emissions.
- **Portability:** Is light in weight of 3.3 kg and portable to travel.
- **Fuels:** Compatible with various woody biomass materials, encompassing fuelwood..
- **Efficiency:** The improved cookstove Eco mini model 04 stove has an efficiency of 36.42%.
- **Life Expectancy:** It is Designed for longevity, with a life expectancy exceeding for 7 years.
- **Almost Smokeless:** Designed to significantly reduce smoke emissions and enhancing indoor air quality making cooking easier.

Photos of stove design

Sustainable Development Goals

Project activity is committed to making substantial contributions to sustainable development, specifically across seven key SDGs:

- **SDG 1** – No Poverty: the project aims of providing the basic service need in the household in the form of improved cookstove to the rural households.
- **SDG 3** – Good Health and Well-being: Our initiative aims to enhance indoor air quality, thus improving the health of women and children while reducing smoke and fire-related injuries.
- **SDG 4** – Quality Education: the project is aiming to provide the relevant skills to the youth of the area for the collection of data during the distribution and monitoring of the improved cookstoves.
- **SDG 5** – Gender Equality: By reducing the drudgery of women and offering time savings, we empower them to engage in more productive activities.
- **SDG 7** – Affordable and Clean Energy: Our cookstoves contribute to making clean energy more accessible and affordable, aligning with this SDG.
- **SDG 8** - Decent Work and Economic Growth: aiming to foster decent work opportunities and promote economic growth by providing employment opportunity in distribution and maintenance of the cookstoves.
- **SDG 13** – Climate Action: The reduction in firewood consumption and greenhouse gas emissions, along with forest and biodiversity conservation, aligns with the objectives of this SDG.
- **SDG 15**: Life on Land: the project aims in reduction the fuelwood consumption for the domestic use. The reduction in fuelwood consumption results in the sustainable forest management objective of the SDG.

A.4 Scale of the project

>>The project activity is a small-scale project as per the applied methodology – TPDDTEC, version 4.0. “For the purpose of this methodology, the project is considered small scale activity when aggregate energy savings of the project activity upto 60 GWh per year or 180 GWh_{thermal} per year in fuel input”.

The thermal energy savings by the project activity is: 131.83 GWh_{thermal} per annum

A.5 Funding sources of project

>> The initial capital to support the manufacturing of the cookstoves is backed by IICARE Foundation (Project Developer). The entirety of the initial capital requirement is secured through private equity, with no public participation. Consequently, public funding is not implicated in this project.

The Project Developer relies on carbon financing to support the project.

SECTION B. APPLICATION OF APPROVED GOLD STANDARD METHODOLOGY (IES) AND/OR DEMONSTRATION OF SDG CONTRIBUTIONS

B.1. Reference of approved methodology (ies)

>> The Project Activity involves the dissemination of Improved cookstoves technologies within state of Maharashtra in host country India. The methodology chosen for determining the emission reductions from the project activity is

Reduced Emissions from Cooking and Heating: Technologies and Practices to Displace Decentralized Thermal Energy Consumption (TPDDTEC) version 04.0²

Methodological Tools:

- Tool 30: Calculation of the fraction of non-renewable biomass (Version 04.0)³
- Standard for sampling and surveys for CDM project activities and programmes of activities (version 09.0)⁴
- Guideline: Sampling and surveys for CDM project activities and programme of activities (version 04.0)⁵
- Requirements and guidelines: usage Rate monitoring version 2.0⁶

B.2. Applicability of methodology (ies)

>> The methodology measures below constitute the justification for the choice of the selected methodology TPDDTEC, version 04.0, by showing that Project activity meets each applicability condition of the methodology

S.No	Methodology Requirements	Project Justification
1.	Project shall choose a technology design that has predictable performance in that	The Project activity involve distribution of Eco Mini model 04 Improved cookstoves

⁶ <https://globalgoals.goldstandard.org/407g-ee-ics-tpddtec-usage-guidelines/>

	it is proven to be efficient and durable underfield conditions; for cookstoves, the rated thermal efficiency shall be at least 20%	("ICS") which have high thermal efficiency of 36.42%. The stove will improve the efficiency compared to the existing stove in use. Therefore, under project activity there would saving of non-renewable biomass the cookstoves which would be distributed would have a high thermal efficiency than 20%.
2.	The technology shall have continuous useful energy output of less than 150kW per unit, where "continuous useful energy output" is defined above	The cookstoves distributed under the Project activity would deliver the thermal energy. The ICS distributed under the Project activity would have a continuous useful energy less than 150kW.
3.	The project activity is implemented by a project developer and can include additional project participants listed in Appendix 2 of the PDD template. The individual households and institutions may be represented collectively by community organizations, etc., but do not individually act as project participants.	The project activity would be developed Project developer. The details of the project participant is mentioned in the Appendix 2 of the document.
4.	The project developer must design incentive mechanism(s), which should be effective as fast as possible, for the elimination of inefficient baseline stoves that are replaced by the project cooking devices and describe the	The removal and continued non-use of traditional mud cookstoves (the baseline technology replaced by this project activity) is in many cases unlikely and impractical to monitor. However, education of local people on the extensive health and environmental benefits of abandoning inefficient baseline technology entirely is the mechanism to

	incentive mechanism(s) in the PDD/VPA-DD at the time of validation.	progressively change the practices habits. The Project Developer directly or indirectly always remains connected to the end users of the cookstoves and motivates them to use. Also, there is constant monitoring for the same.
5.	To avoid double counting or double claiming, the project developer must: i. clearly communicate its ownership rights and intention of claiming the emission reductions resulting from the project activity to the following parties by contract or clear written assertions in the transaction paperwork: all other project participants; project technology manufacturers; and retailers of the project technology or the renewable fuel in use; and ii. inform and notify the end users that they cannot claim emission reductions from the project, and ii. exclude from the project activity, cooking devices included in any other voluntary market or CDM project activity/PoA, and strive not to displace the	The avoidance of the double counting incorporated under the Project activity by the following means: i. declaration signed by the manufacturer of the cookstove, distributing party (if any), and the Project developer too. ii. During the stakeholder consultation and at the time of distribution of the cookstoves the Users (beneficiaries) would also be told about the transfer of carbon rights to Project Developer. The same would be documented in the declaration signed by the user. The copy of declaration is provided to user and would also be kept with the Project Developer in the head office. iii. The cookstoves are provided with a unique serial number. This unique serial number will be used in Project activity only and a declaration would also be signed by Project Developer for not seeking registration in any other mechanisms other than the Gold Standard.

	cooking devices of another CDM or voluntary project/PoA. See data and parameters not monitored, Avoidance of double counting or double claiming with other mitigation actions, for details on this demonstration.	
6.	Project activities making use of solid fossil fuel in the project scenario or other improved fossil fuel cookstoves meeting certain conditions described in the footnote to Table 1 (e.g., switch from three stone fire biomass stoves to LPG stoves) may only claim emission reductions for energy efficiency improvement aspect and shall assume the same baseline and project fuel for emission reduction calculations.	In the Project activity, the project devices distributed are biomass improved cookstove device. Hence no fuel switch technology is introduced.
7.	Project activities making use of a new solid biomass feedstock in the project situation (e.g. switch to green charcoal or renewable biomass briquettes) must comply with relevant specific requirements for biomass related project activities, as defined in the latest version of the Community Services Activity Requirements. The specific	Not applicable as the project activity does not make use of a new biomass feedstock in project situation. The baseline fuel and project fuel is same.

	requirements apply to both plantations established for the project activity and/or existing plantations that will supply biomass feedstock.	
8.	Adequate evidence is supplied to demonstrate that indoor air pollution (IAP) levels are not worsened compared to the baseline, and greenhouse gases emitted by the project fuel/stove combination are estimated with adequate precision Furthermore, for projects where cooking will move from outdoor to indoor or where the project technology reduces ventilation (for example, changing from a stove with chimney to improved stove with no chimney), indoor air pollution (IAP) levels shall not worsen in the project compared to the baseline, including PM 2.5 and carbon monoxide (CO) emissions. This may be demonstrated before project Design Certification or during project operation using the certification resulting from of a manufacturer's test, report of field testing of the technology's PM 2.5 and carbon monoxide (CO) emissions, report of lab	The fuel used in both the project and baseline scenario is the same, as such there are no additional harmful gases released in the project scenario. Distributed in households that previously used a traditional inefficient device. As such, both the volume of greenhouse gases and volume of harmful gases are reduced in the project scenario. The emission reduction calculation will be based on fuel usage measurements for cook stoves (Kitchen Performance Tests and Water Boiling Tests) compared to Baseline Field Test.

	testing of the technology, or results of modelling of the technology's operation under field conditions. If none of these are available, reference from published literature or report by independent agencies may be used as evidence, provided it is not more than 5 years old.	
--	---	--

Applicability of Tool 30:

S.No	Tool Requirements	Project Justification

DNAs to submit region- or country-specific default fNRB values, following the procedures for development, revision, clarification and update of standardized baselines (SB procedures); or	The tool is used for the determination of f_{NRB} for the project boundary host country of India Therefore this applicability criteria is not valid for the current project
2.	project participants to calculate project- or PoA-specific fNRB values.	The tool is used for the determination of f_{NRB} for the project boundary host country India

B.3. Project boundary

>> The project is implemented in state Maharashtra in the host country India. The improved cookstoves is been distributed amongst the rural household in the various districts of the states. Mainly the areas where the dependency on forest is high is been covered under the distribution. The firewood is being forged by the community from the nearby forest.

Figure 1 Figure representing the baseline scenario and the project

Source	GHGs	Included ?	Justification/Explanation
Baseline scenario	CO ₂	Yes	Important source of emissions
	CH ₄	Yes	Important source of emissions
	N ₂ O	Yes	Minor source of emission
Project scenario	CO ₂	Yes	Important source of emissions
	CH ₄	Yes	Important source of emissions
	N ₂ O	Yes	Minor source of emission

B.4. Establishment and description of baseline scenario

>>

Use of traditional mud cookstoves or three stone stoves for cooking and boiling water by the project stove users is deemed as the realistic pre-project scenario. Traditional biomass remains the main energy source for cooking in rural areas and poor urban clusters. Around two-thirds of households use solid cooking fuels (e.g., firewood, crop residue, cow dung cake, and coal/lignite/charcoal). Households using dung cake for cooking and kerosene and other oils for lighting were found to have significantly higher odds for ARIs (acute respiratory infections). Household air pollution is associated with increased risk of tuberculosis, asthma, mortality from cardio-respiratory illnesses, and non-respiratory problems such as adverse pregnancy outcomes, prematurity, and low birth weight .

The National Family Health Survey (NFHS) -5 Report notes that a greater proportion of rural households—41.4% ⁷continue to use wood fuel for cooking, with this being the case than in rural regions. This demonstrates that they are mostly reliant on biomass, and they also use conventional cooking techniques. Our cookstoves are intended to replace those inefficient equipment that conventional cookstoves from the homes that rely on biomass as a source of energy principal cooking.

Therefore, it is expected that in the event that project activity does not occur, the baseline scenario would be the anticipated consumption of fossil fuels to satisfy requirements for thermal energy comparable to those supplied by the project's gadgets.

A baseline survey was conducted in Maharashtra for now to provide information on the target population, baseline technology used, fuel consumption, leakage, and sustainable development indicators. Further, it will be conducted in other states in which distribution will take place. The project stove users' uses of traditional mud stoves and also the three-stone stoves or three-stone/open fire stoves for cooking and water boiling was used in the pre-project situation.

For cooking, traditional biomass is still the primary energy source in impoverished urban clusters and rural regions. According to the 2011 Census (62.55%)⁸ percentage of rural households used firewood for cooking. This demonstrates that they are mostly reliant on biomass, and they also use conventional cooking techniques. Our cookstoves are intended to replace those inefficient equipment that conventional cookstoves from the homes that rely on biomass as a source of energy principal cooking.

⁷ NFHS 5 report, page number 3 point number 10.

⁸ Kindly refer to the Spine chart for the use of fuel in the rural households
https://censusindia.gov.in/census.website/data/data-visualizations/availability_of_fuel_Spine-Chart

Therefore, it is expected that in the event that project activity does not occur, the baseline scenario would be the anticipated consumption of fossil fuels to satisfy requirements for thermal energy comparable to those supplied by the project's gadgets.

A baseline survey was conducted on 07/04/2023 to 18/04/2023 in different project areas in the state of Maharashtra. A total of 361 households in 65 different villages were randomly selected in the rural areas of the project boundary.

Data Collection:

The data collection was carried out by the field staffs. All of them were familiar with the local structures and surroundings. Before collecting the data, the Field staffs were supposed to give the brief introduction to the project activity, the objective of the surveys as well as guidance on how to collect the data. Through these interviews, it is important to collect the data necessary to have a better understanding of the functioning of the households and the consumption of fuel. The collected data is specific to the characteristics of the baseline scenario and includes the following information mentioned below: Household characteristics, Name of the user, Address, telephone number, and GPS coordinates of the household, Kitchen and cooking habits, Number of people served food, Types of baseline technology used and estimated frequency, Household energy and supply, Types of fuels used and estimated quantities time for collecting fuelwood.

Findings:

The surveyed households use only the traditional mud cookstoves for their cooking purposes, where the use of fuelwood is the main source of the fuel. The fuelwood is collected from the forest nearby and the main responsibility for the collection of fuelwood is of women in the household. The population of the area is homogenous within the target population of the Project area so no cluster has to be distinguished. Through the baseline survey that was conducted it was found that no household in the project area uses the LPG for cooking and use traditional mudstoves for cooking.

B.5. Demonstration of additionality

Specify the methodology, activity requirement or product requirement that establishes deemed additionality for the proposed project (including the version number and the specific paragraph, if applicable).	The project meets the requirements of Positive List mentioned within the Community Services Activity Requirements V1.2. Principle 5- Financial Additionality & Ongoing Financial Need (4.1.9) states that Projects that meet any of the following criteria are considered as deemed additional and therefore are not
---	--

	required to prove Financial Additionality at the time of Design Certification: 1. 2. (a) Positive list (Annex B) (b) Projects located in LDC, SIDS, LLDC (c) Micro-scale projects
Describe how the proposed project meets the criteria for deemed additionality.	It is mentioned in the Annex B- Positive list, para number 1.1.3 Project activities solely composed of isolated units where the users of the technology/measure are households, where each unit results in ≤ 600 MWh of energy savings per year or ≤ 600 tonnes of emission reductions per year. The project is type-II project, where the technology units will be distributed to the households. It has been proven in the ex-ante calculations that in this project each cookstove saves 8.53 MWhthermal energy per year. Therefore, the project can be deemed additional..

B.5.1 Prior Consideration

>>

The project was submitted to Gold standard within 1 year of the project implementation. Hence, the prior consideration of carbon financing for commercial sustainability of the project is adequately demonstrated. The project is retroactive, and the physical SFR round is completed on the 20/9/2024

Project Start date: 28/04/2023

First date of submission to GS: 17/04/2024

B.5.2 Ongoing Financial Need

>>

This section is left blank intentionally as the section of this document is not applicable.

B.6. Sustainable Development Goals (SDG) outcomes

Relevant Target/Indicator for each of the three SDGs

SUSTAINABLE DEVELOPMENT GOALS TARGETED	MOST RELEVANT SDG TARGET	SDG IMPACT
		INDICATOR (PROPOSED OR SDG INDICATOR)
13 Climate Action	13.2 Integrate climate change measures into national policies, strategies and planning	13.2.2: Total greenhouse gas emissions per year Project activity determine this by: Emission Reduction by project activity.
1 No Poverty	1.4 ensure that all men and women, in particular the poor and the vulnerable, have equal rights to economic resources, as well as access to basic services, ownership and control over land and other forms of property, inheritance, natural resources, appropriate new technology and financial services, including micro finance.	1.4.1 Proportion of population living in household with access to basic services. Project activity determine this by: Number of Improved cookstoves distributed to the rural households.
3 Ensure healthy lives and promote well-being for all at all ages.	3.9 By 2030, substantially reduce the number of the death and illnesses from hazardous chemical and air, water and soil pollution and contamination	3.9.1: Mortality rate attributed to household and ambient air pollution Project activity determine this by: Proportion population claiming reduction in smoke due to Improved cookstoves

4 Quality Education	4.4 substantially increase the number of youth and adults who have relevant skills, including technical and vocational skills, for employment, decent jobs and entrepreneurship	4.4.1 Proportion of youth and adults with information and communications technology (ICT) skills, by type of skill. Project activity determine this by: Number of people trained for the data collection in distribution and monitoring of the improved cookstoves
5 Gender Equality	5.4: Recognize and value unpaid and domestic work through the provision of public services, infrastructure and social protection policies and the promotion of shared responsibility within the household and the family as nationally appropriate	5.4.1: Proportion of time spent on unpaid domestic and care work, by sex, age and location. Project activity determine this by: Proportion of women claiming the reduction in the wood collection time.
7 Ensure access to affordable, reliable, sustainable and modern energy for all	7.1 By 2030, ensure universal access to affordable, reliable and modern energy services	7.1.2 Proportion of population with Primary reliance on clean fuels and technology Project activity determine this by: Number of households using the improved cookstoves regularly
8 Decent work and economic growth	8.3: Promote development – oriented policies that support productive activities, decent job creation, entrepreneurship, creativity and innovation, and encourage the formalization and growth of micro-,small- and medium sized enterprises, including through access to financial services	8.3.1: Proportion of informal employment in total employment, by sector and sex. Project activity determine this by: Number of people trained for the data collection activity in distribution and monitoring of the cookstoves

15 Life on Land	15.2 promote the implementation of sustainable management of all types of forests, halt deforestation, restore degraded forests and substantially increase afforestation and reforestation globally	15.2.1 Progress towards sustainable forest management Project activity determine this by: savings in fuelwood consumption for cooking purpose.
-----------------	---	---

B.6.1 Explanation of methodological choices/approaches for estimating the SDG Impact

>> Outcome of SDG 1 (No Poverty)

For this Project Activity, the baseline scenario is the number of households using traditional cook stoves for the cooking purposes. This project distributes the efficient improved cookstoves which is a basic necessity for the rural households. The outcome of SDG 1 will be measured by the number of efficient cookstoves distributed during the project. The equation for determining the impact is

$$N_{SDG\ 1} = N$$

$N_{SDG\ 1}$: Impact on SDG 1

N = The total Number of clean devices installed by the project.

Outcome of SDG 3 (Good Health and Well Being)

The efficient cookstove leads to a reduction in fuel consumption which in turn will improve the Indoor Air quality. The use of improved cookstove have positive impacts on health and reduced the chances of diseases by air pollutions. The relevant indicator is: Mortality rate attributed to household and ambient air pollution.

The SDG 3 contribution is evaluated by the proportion of households claiming decrease in the smoke and improvement in the air quality. To collect the information on air quality, the Monitoring survey would include the questions.

The share of household confirming the decrease in smoke by the improved cookstove in the monitoring survey.

$$S_{less\ smoke} = HH_{less\ smoke,y}$$

where;

$$S_{less\ smoke} = \text{Number of households with improved air quality}$$

$H_{less\ smoke,y}$ = proportional household claiming the reduction in the indoor air pollution by the use of improved cookstove (%)

Outcome for SDG 4 (Quality Education)

This Project Activity also aims to provide training to employees for skill development on sustainable development, environmental protection, climate change, etc.

The outcome of the SDG 4 is calculated based on the number of people received training.

$N_{training}$ = Number of employees received training on the mobile applications

Outcome for SDG 5 (Gender Equality)

Women and girls perform the majority of unpaid domestic work. This leaves them with less time to rest, study and realize their economic potential, leaving them in time poverty. In regards to time, women are poorer than men as unpaid domestic duties, such as collecting firewood, must be added to their market productive work, making time much scarcer. Women are widely recognized as being principally responsible for wood collection.

These trends demonstrate that reducing the amount of firewood required by households has the potential to reduce the time poverty of women, because the time burden of collecting firewood, which falls disproportionately on women, will be reduced. The proportion households claiming the decrease in the wood collection time will be taken as a proxy contribution towards the SDG target.

The total impact of reduction in time spent in collecting firewood by the project activity are then calculated as follows:

$$TR_y = HH_{time\ reduction}$$

where;

TR_y = Total reduction in time spent in collection of firewood in year y (%)

$HH_{time\ reduction}$ = Proportional households claiming the reduction in the time spent in project scenario for firewood collection (%)

Outcome of SDG 7 (Affordable and Clean Energy)

For this Project Activity, the baseline scenario is the number of households using traditional cook stoves for the cooking purposes. This project distributes the efficient

cookstoves in the households of the rural areas. The outcome of SDG 7 will be measured by the number of efficient cookstoves distributed during the project.

N = The total Number of clean devices installed by the project.

Outcome of SDG 8 (Decent work and Economic Growth)

For this Project Activity, the ground staff are hired for the distribution and monitoring of the cookstoves. This project increases the person employed in the rural areas therefore the target 8.3 of the goal is addressed. The outcome of the SDG 8 is calculated based on the number of trainings to the field staff for the same.

$$P_y = P_N$$

where;

P_y = Number of people got training from the project (Numbers)

P_N = Number of people trained for data collection.

Outcome of SDG 13 (Climate Action)

For this Project Activity, the baseline scenario is the number of households using the traditional cookstoves for the cooking purposes. The project increases the adaptation rate of efficient cookstoves. The outcome of SDG 13 is the emission reduction in form of tCO₂e from the project. The Emission Reductions by the project is estimated by using the Gold Standard approved methodology Reduced Emission from Cooking and Heating: Technologies and Practices to Displace Decentralised Thermal Energy Consumption (TPDDTEC) version 04.0.

Emission reduction calculations

TPDDTEC version 04.0 is applicable to the project activities that introduce technologies (improved cookstoves) that reduces the greenhouse gas emissions from the thermal consumption of households. According to section 3.10 of the applied methodology, method 1 is applied for the calculations. Method 1 is used in which the baseline and project fuel(s) are identical and emissions reductions are exclusively from improved efficiency.

$$ER_y = \sum_{b,p} \left(N_{b,p,y} \times U_{p,y} \times SFS_{p,b,y} \times NCV_{b,fuel} \times (f_{NRB,b,y} \times EF_{b,f,CO2} + EF_{b,f,nonCO2}) \right) - \sum LE_{p,y}$$

Equation 1

where;

ER_y = Emission reduction for total project activity in year y (tCO₂e/yr)

$\sum_{b,p}$	=	Sum over all relevant baseline b/project p pairs
$N_{b,p,y}$	=	Number of project technology-days included in the project database for baseline b/project p
$U_{p,y}$	=	Cumulative Usage rate for technologies in project scenario p in year y (fraction) = 1.0 for estimation of the Emission reductions
$SFS_{p,b,y}$	=	Specific fuel savings for an individual project technology of baseline b/project p pair in year y (tonne)
$NCV_{b,fuel}$	=	Net calorific value of the fuel(s) that is substituted or reduced in baseline b (TJ/tonne) = 0.0156 TJ/tonne (IPCC default provided in methodology parameter ICS 12)
$f_{NRB,b,y}$	=	Fractional non-renewability status of woody biomass fuel during year y (fraction). For biomass, it is the fraction of woody biomass that can be established as non-renewable. This parameter is omitted when f is a fossil fuel. = 71.03% (for India calculated using CDM tool 30)
EF_{b,f,CO_2}	=	CO ₂ emission factor from use of fuel f (tCO ₂ /TJ) = 112 tCO ₂ /TJ (As per methodology parameter ICS 8)
$EF_{b,f,nonCO_2}$	=	Non-CO ₂ emission factor arising from use of fuel f, when the baseline fuel f is biomass or charcoal (tCO ₂ e/TJ). This parameter is omitted when f is a fossil fuel. = 9.46 tCO ₂ /TJ (as per methodology parameter ICS 9)
$LE_{p,y}$	=	Leakage for project scenario p in year y (tCO ₂ e/yr) =0.95 multiplied with the equation as per section 3.11 Leakage emission in applied methodology.

If any Improved Cookstove (ICS) got damaged after the warranty period (2 years) and before the lifetime, Project Developer will encourage the household user to get a new ICS system and if they (Household) did not get new cookstove, then it will be not accounted for emission reduction calculation and ERs from this system will not be claimed.

Stoves are designed in a way that there are no moving parts and the individual components meet robust quality standards. Therefore, the life of the cookstoves is

claimed as 7 years and Project Manufacturer also gives the warranty of 2 years on the cookstoves.

The field staff of Project Developer (IICARE Foundation) who constantly monitors the stove usage and visit beneficiary households collect this information and act towards getting an issue redressed. Any reduction of the stove usage will be monitored in the surveys and shall be accounted as such.

Determining $f_{NRB,b,y}$

$f_{NRB,b,y}$ is calculated as per the CDM Tool 30, Calculation of fraction of non-renewable biomass, version 04.0.

$$f_{NRB} = \frac{NRB}{NRB + RB}$$

Equation 1

Section 3, para 7; Tool 30 version 04.0

Where,

f_{NRB}	Fraction of non-renewable biomass (fraction or %)
NRB	Quantity of non-renewable biomass consumed in the applicable area in the relevant period (tonnes)
RB	Quantity of renewable biomass that is available on a sustainable basis in the applicable area in the relevant period (tonnes)

As per Forest Survey of India report 2019 chapter 10⁹, Annual fuelwood consumption in household sector and consumption of wood in House construction, Furniture and Agriculture is given below:

PROCEDURE TO ESTIMATE RB:

Renewable biomass (RB) in the country/region/area is estimated using the equation below:

$$RB = \sum (MAI_{forest,i}(F_{forest,i} - P_{forest,i})) + \sum (MAI_{other,i}(F_{other,i} - P_{other,i}))$$

Equation 4

Section 3.2, para 19; Tool 30 version 04.0

⁹ <https://fsi.nic.in/isfr19/vol1/chapter10.pdf>

Where:

$MAI_{forest,i}$ = Mean Annual Increment of woody biomass growth per hectare in sub-category i of forest areas (tonnes/ha/year)

For this parameter report from Ministry of Environment and Forest, Govt. of India has been referred

$MAI_{other,i}$ = Mean Annual Increment of woody biomass growth per hectare in sub-category i of other wooded land areas (tonnes/ha/year)

Same value as MAI forest, i is considered

$F_{forest,i}$ = Extent of forest in sub-category I (ha).

India state of forest report, 2021 has been referred for this parameter.

$F_{other,i}$ = Extent of other land in sub-category i in the relevant period (ha).

$P_{forest,i}$ = Extent of non-accessible area (e.g., protected area where extraction of wood is prohibited, geographically remote area) within forest areas (in sub category i) in the relevant period(ha)

$P_{other,i}$ = Extent of non-accessible area (e.g., protected area where extraction of wood is prohibited, geographically remote area) within other land areas (in sub category i) in the relevant period (ha).

Neglected due to non-availability of region-specific data.

i = Sub-category i of forest areas and other land areas

The f_{NRB} would be

Country	f_{NRB}	Source
India	71.03%.	Excel workbook ER Calculations worksheet " f_{NRB} "

Leakage

As per the section 3.11 of the methodology TPDDTEC version 04.0, the following leakages are to be considered

Option 1: Apply a default adjustment factor of 0.95 to the emission reductions to approximate leakage emissions. In this case, the term " $-\sum LE_{p,y}$ " in equations 1 changes to " $* 95\%$ ".

B.6.2 Data and parameters fixed ex ante

SDG13

ICS 1

Data/parameter	Baseline scenario survey results
Unit	NA
Description	Report of the results of the baseline scenario survey
Source of data	The report presents the results of the Baseline Scenario
Value(s) applied	Refer Baseline survey sheet and findings are presented in the section B.4 of the document.
Choice of data or Measurement methods and procedures	NA
Purpose of data	Determination of baseline Scenario
Additional comment	-

ICS 2

Data/parameter	Project technology description
Unit	NA
Description	The detailed description of the project technology: - Manufacturer name:AR Steels, - Product name: Eco mini model 04 Improved Cookstoves

	- Technology type: Improved Cookstove - Rated thermal efficiency for following cases: 36.42% - Performance certification by Indian Institute of Technology, New Delhi.
Source of data	Manufacturer specifications
Value(s) applied	Refer section A.3
Choice of data or Measurement methods and procedures	NA
Purpose of data	determination of project scenario
Additional comment	NA

ICS 3

Data/parameter	Expected technical life of project technology
Unit	Years
Description	The expected technical life of the cookstove distributed is 7 years as per manufacturer's specifications.
Source of data	Manufacturer specifications
Value(s) applied	7 years
Choice of data or Measurement methods and procedures	Taken based on the ICS manufacturer specifications
Purpose of data	To determine project duration
Additional comment	The expected life of the cookstove is 7 years as per manufacturer's specifications. In case the project stove need repairs and maintenance, the distributing agency is made aware of the parts to be recalled from the manufacturer and replacement of the parts. At the end of crediting period (5 year) and the lifetime of the cookstove (7 years), the condition of the cookstove would be analysed to further renew the crediting period of the project.

ICS 4

Data/parameter	Indoor air pollution (IAP) levels of the project technology
Unit	NA
Description	In the baseline and project scenario, the cooking is done inside. The PM _{2.5} is reduced as per manufacturing specifications. The smoke level is reported to be reduced by the users during the monitoring survey.
Source of data	Lab testing report of the improved cookstove by Indian Institute of Technology, New Delhi
Value(s) applied	Indoor air pollution level is reduced
Choice of data or Measurement methods and procedures	Taken based on laboratory test
Purpose of data	To calculate Project Scenario
Additional comment	-

ICS 5

Data/parameter	Avoidance of double counting or double claiming among project participants
Unit	NA
Description	Evidence of avoidance of double counting or double claiming with other parties directly involved with the project programme.
Source of data	Written confirmation and declaration
Value(s) applied	Signed declaration from the manufacturer and the distributor of ICS
Choice of data or Measurement methods and procedures	The mechanism for the carbon rights transfer has been put in place and the same shall be verified to ensure there is no double counting or claiming by the project participants
Purpose of data	To demonstrate avoidance of double counting or double claiming among project participants
Additional comment	-

ICS 6

Data/parameter	Avoidance of double counting or double claiming with other mitigation actions
Unit	NA

Description	IICARE Foundation is Project developer for the project and has full ownership of the carbon benefits for the project activity. No other parties will be involved in claiming carbon credits.
Source of data	Written confirmation and declaration
Value(s) applied	Singed declaration from the manufacturer and the distributor of ICS
Choice of data or Measurement methods and procedures	The mechanism for the carbon rights transfer has been put in place and the same shall be verified to ensure there is no double counting or claiming by the project participants
Purpose of data	To demonstrate avoidance of double counting or double claiming among project participants
Additional comment	NA

ICS 7

Data/parameter	Regulatory framework for provision of thermal energy services
Unit	NA
Description	Evidence that the project does not undermine or conflict with any national, sub-national or local regulations guidance for thermal energy supply/devices or fuel supply or use
Source of data	there are no national, sub national and local regulations or guidance for the thermal energy services of the type the project provides in the project boundary.
Value(s) applied	No national, sub-national and local regulations or guidance affect implementation of this project. ¹⁰
Choice of data or Measurement methods and procedures	There is no national, sub-national and local regulations or guidance available for provision of thermal energy services/devices.
Purpose of data	Avoidance of double counting
Additional comment	NA

¹⁰ pib.gov.in/PressReleaseIframePage.aspx?PRID=1847812

ICS 8

Data/parameter	EF_{b,f,CO_2}
Unit	tCO ₂ /TJ
Description	CO ₂ emission factor arising from the use of fuels in baseline scenario
Source of data	Default value provided in TPDDTEC version 04.0
Value(s) applied	Wood: 112 tCO ₂ /TJ
Choice of data or Measurement methods and procedures	Default value as per the applied methodology
Purpose of data	Calculation of emission reduction
Additional comment	This will be fixed ex-ante. The emission factors for use of firewood in baseline

ICS 9

Data/parameter	$EF_{b,f,nonCO_2}$
Unit	tCO ₂ /TJ
Description	Non - CO ₂ emission factor arising from use of fuels in baseline scenario
Source of data	Methodology TPDDTEC ver 04.0 default
Value(s) applied	Wood: 9.46 tCO _{2e} /TJ
Choice of data or Measurement methods and procedures	Default value as per the applied methodology
Purpose of data	Calculation of emission reduction
Additional comment	This will be fixed ex-ante

ICS 12

Data/parameter	NCV _{b,fuel}
Unit	TJ/ton
Description	Net calorific value of the fuels used in the baseline
Source of data	approved methodology TPDDTEC version 04.0
Value(s) applied	0.0156

Choice of data or Measurement methods and procedures	Not applicable
Purpose of data	Calculation of emission reduction
Additional comment	The methodology default emission factor has been applied

ICS 17

Data/parameter	$f_{NRB,b,y}$
Unit	%
Description	Fractional non-renewability status of woody biomass fuel during year y, in case the baseline is biomass or charcoal
Source of data	Determined using CDM Tool 30 version 04.0 ¹¹
Value(s) applied	71.03%
Choice of data or Measurement methods and procedures	Calculated using the CDM Tool 30 version 04.0
Purpose of data	Calculation of emission reduction
Additional comment	Reassess of the f_{NRB} value would be done at the renewal of crediting period.

ICS 18

Data / Parameter	$P_{b,y}$
Unit	ton/household-day
Description	Quantity of fuel that is consumed in baseline scenario b during year y
Source of data	Baseline survey
Value(s) applied	Firewood: 0.0109 ton/household-day
Choice of data or Measurement methods and procedures	This is determined based on Kitchen Performance Test: At the start of the crediting period, i.e. value is determined by KPT and fixed for this crediting period (28/04/2023 to 27/04/2028)
Purpose of data	Calculation of $SFS_{b,p,y}$ under method 1

¹¹ [EB115_repan22_TOOL30_v04.0 \(unfccc.int\)](#)

Additional comment

The values applied have been determined from the baseline KPTs survey results.
The firewood values are within the threshold value of 0.75 tonnes/person*year of fuelwood.

B.6.3 Ex ante estimation of SDG Impact

>>

SDG 1

$$N_p = N$$

Where:

N The total number of stoves installed by the proposed project

Parameter	Description	Ex-Ante Value	Unit
N_p	The total number of stoves installed by the proposed project	15,500	Number

SDG 3

$$S_{less-smoke} = HH_{less-smoke,y}$$

Parameter	Description	Ex-Ante Value	Unit
$HH_{less-smoke,y}$	Share of households confirming less smoke through improved stove	100%	Percentage
$S_{less-smoke}$	No of households with improved in air quality	100%	Percentage

SDG 4

$N_{training}$ = Number of employees received training.

$N_{training}$ = 50 (ex-ante)

SDG 5

$$TR_y = HH_{time\ reduction}$$

Where:

TR_y = Total reduction in time spent in collection of firewood in year y (%)

$HH_{time\ reduction}$ = Proportional households claiming the reduction in time spent in project scenario for firewood collection

Parameter	Description	Ex-Ante Value	Unit	Source
TR_y	Total reduction time spent collecting firewood for project activity in year y	100%	Percentage	Calculated
$HH_{time\ reduction}$	Proportional households claiming the reduction in time spent in project scenario for firewood collection	100%	Percentage	Monitoring Survey

SDG 7

$N_p = N$

Where:

N The total number of stoves installed by the proposed project

Parameter	Description	Ex-Ante Value	Unit
N_p	The total number of stoves installed by the proposed project	15,500	Number

SDG 8

$$P_y = P_N$$

where;

P_y = Number of people received employment from the project
 P_N = Number of people trained and employed for the data collection

Parameter	Description	Ex-Ante Value	Unit	Source
P_y	Proportion of informal employment in total employment (Numbers)	50	Number	Training attendance

P_N	Number of people trained for data collection (Numbers)	50	Number	Project Training records
-------	--	----	--------	--------------------------

SDG 13:

According to methodology emission reductions shall be calculated as:

$N_{b,p,y}$	Number of project technology-days included in the project database for baseline b/project p pair in year y (days)	5,657,500
$U_{p,y}$	Cumulative Usage rate for technologies in project scenario p in year y (fraction)	90%
$SFS_{p,b,y}$	Specific fuel savings for an individual project technology of baseline b/project p pair in year y (mass or volume units/technology*day)	0.005
$NCV_{b,fuel}$	Net calorific value of wood (TJ/ton)	0.0156
$f_{NRB,y}$	Fractional non-renewability status of woody biomass fuel during year y (fraction)	71.03%
$EF_{b,f,CO2}$	CO ₂ emission factor from use of fuel f (tCO ₂ e/TJ)	112
$EF_{b,f,nonCO2}$	Non-CO ₂ emission factor arising from use of fuel f, when the baseline fuel f is biomass or charcoal (tCO ₂ e/TJ).	9.460
$LE_{p,y}$	Leakage for project scenario p in year y (tCO ₂ e/yr)	0.95
ER_y	Emission Reductions tCO ₂ /HH	36,220

SDG 15(Life on Land)

$$B_y = B_{b,y} - B_{p,y}$$

where;

B_y	=	Firewood saving by the project in year y (tonnes/year)
$B_{b,y}$	=	Wood Consumption in baseline scenario (tonnes/year)
$B_{p,y}$	=	Wood Consumption in the project scenario (tonnes/year)

Parameter	Description	Ex-Ante Value	Unit	Source
B_y	Firewood saving by the project in year y (tonnes/year)	30,509	tonnes/year	Calculation
$B_{b,y}$	Wood Consumption in baseline scenario (tonnes/year)	61,840	tonnes/year	Baseline Survey
$B_{p,y}$	Wood Consumption in the project scenario (tonnes/year)	31,331	tonnes/year	Project monitoring survey

B.7. Monitoring plan

B.7.1 Data and parameters to be monitored

SDG 13
ICS 15

Data / Parameter	Avoidance of double counting or double claiming among project technology end users
Unit	NA
Description	Evidence of avoidance of double counting or double claiming with project technology end users
Source of data	End user agreements
Value(s) applied	NA
Measurement methods and procedures	All households sign end user agreement through which all beneficiaries waiving of their carbon rights in exchange of ICS

Monitoring frequency	Monitored whenever project technology is sold or otherwise disseminated
QA/QC procedures	Cross check using general internet search and search of public records of Gold Standard and other voluntary market and UNFCCC mechanisms, if applicable
Purpose of data	Checking the double count
Additional comment	Transfer of carbon rights were informed to the users at the time of LSC, and during the signing of the agreement.

ICS 16

Data / Parameter	Presence of stove stacking
Unit	NA
Description	Descriptive statistics of the presence and usage practices of baseline- and other non-project-technology by project technology end users
Source of data	Usage Survey will be conducted on the sampled cookstoves, and users would be asked on usage of the project device for cooking purposes. Usage Survey- use of other stoves, to capture cooking habits and stove usage of households in the region, including quantification of use of baseline devices, by formulating questions and/or collecting evidences to determine the frequency of usage of both the project devices and baseline devices, or monitoring surveys to capture the number of meals cooked.
Value(s) applied	100%
Measurement methods and procedures	Monitoring survey of the cookstove.
Monitoring frequency	Annually
QA/QC procedures	The calculation of $SFS_{p,b,y}$, shall be cross-checked with the observed presence of stove stacking. Ensure any stove stacking is considered so that emission reductions are calculated only from real reduction of, or replacement of, baseline fuel use.
Purpose of data	Usage of baseline stove
Additional comment	NA

ICS 19

Data / Parameter	$P_{p,y}$
------------------	-----------

Unit	tonne/ household-day
Description	Quantity of fuel that is consumed in project scenario p during year y
Source of data	Monitoring survey, Kitchen Performance test
Value(s) applied	(Firewood: 0.0055)
Measurement methods and procedures	Determined using the Kitchen Performance test.
Monitoring frequency	Updated every two years
QA/QC procedures	Transparent data analysis and reporting. Compliance with the general requirements for sampling, general requirements for QA/QC and Kitchen performance test.
Purpose of data	Calculating $SFS_{b,p,y}$ under method 1
Additional comment	The parameter will used to measure $SFS_{b,p,y}$ in method 1.

ICS 20

Data / Parameter	$SFS_{b,p,y}$
Unit	tonne/day
Description	Specific fuel savings for an individual project technology of baseline b/project p pair in year y
Source of data	Calculated from $P_{b,y}$, $P_{p,y}$ and other information to obtain the savings in tonnes/day
Value(s) applied	0.005
Measurement methods and procedures	Calculated
Monitoring frequency	Updated every 2 years
QA/QC procedures	Cross-check with proportional efficiency of baseline and project technology
Purpose of data	Emission reduction calculation
Additional comment	NA

ICS 26

Data / Parameter	$U_{p,y}$
Unit	Qualitative (%)
Description	Weighted average usage rate in project scenario p during year y
Source of data	Monitoring Survey

Value(s) applied	90%
Measurement methods and procedures	Usage survey, following the Usage survey guidelines version 2.0. ¹² The Good Practice is followed for the determination of the parameter. Usage survey with the field training of staff, end user trainings and awareness campaigns were organized for the project.
Monitoring frequency	Annually
QA/QC procedures	Compliance with general requirement for sampling and general requirement of QA/QC provided in the methodology TPDDTEC
Purpose of data	Determination of emission reductions.
Additional comment	NA

ICS 27

Data / Parameter	$N_{b,p,y}$
Unit	Days
Description	Number of project technology-days included in the project database for baseline b/project p pair in year y
Source of data	Calculated from the Project database (kindly refer to the distribution data workbook for the the refernce) as the sum of the number of project Technology units times the calendar days during the year y that they were present at the end user locations
Value(s) applied	5,657,500 (for ex-ante caluculations)
Measurement methods and procedures	This would be measured using the project database
Monitoring frequency	Annually
QA/QC procedures	Cross check the results of the usage survey with the contents of the project database to confirm whether the

¹² Kindly refer to the Usage survey guidelines
https://globalgoals.goldstandard.org/standards/407G_V2.0_EE_ICS_TPDDTEC_Usage-guidelines.pdf

	project technology units surveyed are present at end user locations as expected, or not. If there is discrepancy, this must be explained or corrected.
Purpose of data	Calculations of emission reductions
Additional comment	NA

ICS 28

Data / Parameter	$LE_{p,y}$
Unit	tCO ₂ e per year
Description	Leakage in project scenario p during year y
Source of data	Sources established by following section 3.11 Leakage Emissions from the applied methodology TPDDTEC version 04.0.
Value(s) applied	0.95
Measurement methods and procedures	According to option 1 & section 3.11.2 of applied methodology TPDDTEC version 04.0. The leakage is obtained through applying a default adjustment factor of 0.95 to the emission reductions to approximate leakage emissions.
Monitoring frequency	Default discount value of 0.95 applied to emission reductions.
QA/QC procedures	Compliance with general requirement for sampling and general requirement of QA/QC provided in the methodology TPDDTEC
Purpose of data	Calculations of Leakage
Additional comment	Taken as the default adjustment factor for estimating the leakage.

SDG 1

Data / Parameter	N
Unit	Number
Description	The total number of clean devices installed by the project
Source of data	Project database
Value(s) applied	15,500
Measurement methods and procedures	The project data base is used for the determination of the number of improved cookstoves installed in the project.
Monitoring frequency	Annually
QA/QC procedures	NA

Purpose of data	Sustainable Development Goal assessment
Additional comment	NA

SDG 3

Data / Parameter	$HH_{less\ smoke,y}$
Unit	Qualitative (%)
Description	Users' perception on smoke reduction and Incidence of disease: perceived smoke levels, incidence of coughing, incidence of respiratory illness, Incidence of itchy eyes
Source of data	Monitoring survey
Value(s) applied	100% (Qualitative)
Measurement methods and procedures	Air quality will be assessed through users interviews during the ICS User Survey/ Monitoring survey. Observations as to inside/outside cooking area to confirm answers. During the survey HH users will be interviewed for their perception on the smoke reduction and health benefits related to the reduction in the smoke
Monitoring frequency	Biannually
QA/QC procedures	NA
Purpose of data	Sustainable Development Goal assessment
Additional comment	NA

SDG 4

Data / Parameter	$N_{training}$
Unit	Number
Description	Number of employees received training on the mobile applications
Source of data	Training attendance record
Value(s) applied	50
Measurement methods and procedures	Training attendance for the data collection and monitoring survey of the improved cookstoves distributed in the project activity.
Monitoring frequency	Annually
QA/QC procedures	NA
Purpose of data	Sustainable Development Goal Assessment.
Additional comment	NA

SDG 5

Data / Parameter	$HH_{time\ reduction}$
Unit	Qualitative (%)
Description	Proportional households claiming reductions in the time spent in the project scenario for firewood collection (%)
Source of data	Monitoring Survey
Value(s) applied	100%
Measurement methods and procedures	the parameter would be determined during the monitoring survey. The beneficiary would be asked about their perception on the wood collection time as compared to the baseline scenario.
Monitoring frequency	Annually
QA/QC procedures	Compliance with general requirement for sampling and general requirement of QA/QC provided in the methodology TPDDTEC
Purpose of data	Sustainable Development Goal Assessment.
Additional comment	NA

SDG 7

Data / Parameter	N
Unit	Numbers
Description	Number of ICS under the project
Source of data	Project data base;
Value(s) applied	15,500
Measurement methods and procedures	Sample survey to confirm if project ICS are operational. Operational status will confirm that the users are accessed to affordable and improved energy
Monitoring frequency	Annually
QA/QC procedures	NA
Purpose of data	Sustainable Development Goal Assessment.
Additional comment	NA

SDG 8

Data / Parameter	P_N
Unit	Numbers

Description	Number of people trained from the project activity
Source of data	Training attendance
Value(s) applied	50
Measurement methods and procedures	Trainings are conducted to the field staff for the data collection of the beneficiary and conducting the monitoring of the project.
Monitoring frequency	Annually
QA/QC procedures	NA
Purpose of data	Sustainable Development Goal Assessment.
Additional comment	NA

B.7.2 Sampling plan

Sampling Approach

i. Objective

The sampling approach, used to determine all the parameters mentioned in section B.7.1, is as per the guidelines provided in the applied TPDDTEC methodology version 04.0. The monitoring surveys will be carried out in the project scenario using representative and random sampling. The following parameters will be determined through annual sample survey:

- Usage rate in project scenario p during year y
- Proportion of households reporting less smoke with new stove
- Time saving from fuel wood collection and cooking

The required minimum sample as per methodology guidelines for baseline is given as:

- Group size <300: Minimum sample size 30 or population size, whichever is smaller
- Group size 300 to 1000: Minimum sample size 10% of group size
- Group size > 1000 Minimum sample size 100

Therefore, for the total ICS units installed in the project activity, a minimum sample size of 100 will be randomly selected to collect the required monitoring data.

The following parameters are/will determine through field test/Survey:

- Quantity of fuel that is consumed in baseline scenario b during year y (once before 1st verification) -Already conducted

- Quantity of fuel consumed in project scenario

For the baseline & project field test, the sample size will be determined any one of the following options;

90/30 rule. When the sample sizes are large enough to satisfy the “90/30 rule,” i.e., the endpoints of the 90% confidence interval lie within +/- 30% of the estimated mean, overall emission reductions can be calculated on the basis of the estimated MEAN annual emission reduction per unit or MEAN fuel annual savings per unit.

However, in any cases CME shall ensure the sample size of Field test (FT) is greater than 30.

The sample size calculations are determined using the CDM Standard for sampling and Survey¹³ and simple random sampling with 90/10 confidence interval/precision is used.¹⁴

The sample size is determined using the equations:

$$n \geq \frac{1.645^2 N \times p(1 - p)}{(N - 1) \times 0.1^2 \times p^2 + 1.645^2 p(1 - p)}$$

Where,

- n = Sample size
- N = Total Number of Households (15,500)
- p = Our expected proportion (0.75)
- 1.645 = Represents the 90% confidence interval
- 0.1 = Represents the 10% relative precision (0.1X0.5=0.05=5% points on either side)

ii. Target Population

The target population for different parameters discussed in the section above are given below:

- For the proportional parameter; the target population is the ICS users listed in the project database

¹³ https://cdm.unfccc.int/sunsetcms/storage/contents/stored-file-20191129115244256/Meth_stan05.pdf

¹⁴ https://cdm.unfccc.int/sunsetcms/storage/contents/stored-file-20151023152925068/Meth_GC48_%28ver04.0%29.pdf

- For the mean value parameters; the target population is the total number of operational ICS for which the emission reductions will be accounted for the monitoring periods. The mean value parameters, unless and otherwise required by the estimated samples.

iii. **Sampling frame**

All the households availed with the improved cookstoves by the project will be in sampling frame.

iv. **Sampling method**

As discussed above, simple random sampling approach would be followed for the estimation of sample size. The sample size calculations is determined using the CDM Standard for sampling and Survey¹⁵ and simple random sampling with 90/10 confidence interval/precision is used.¹⁶

The sample size is determined using the equations:

$$n \geq \frac{1.645^2 N \times p(1-p)}{(N-1) \times 0.1^2 \times p^2 + 1.645^2 p(1-p)}$$

Where,

- n = Sample size
- N = Total Number of Households (15,500)
- p = Our expected proportion (0.75)
- 1.645 = Represents the 90% confidence interval
- 0.1 = Represents the 10% relative precision (0.1X0.5=0.05=5% points on either side)

(a) Data

i. **Field measurements:**

1. Checking of a representative sample of each type of ICS installed every year to ensure its operation.
2. Determination of the wood consumption in the sample of each ICS
3. The usage of the old cookstoves as a stacking

¹⁵ https://cdm.unfccc.int/sunsetcms/storage/contents/stored-file-20191129115244256/Meth_stan05.pdf

¹⁶ https://cdm.unfccc.int/sunsetcms/storage/contents/stored-file-20151023152925068/Meth_GC48_%28ver04.0%29.pdf

4. The survey will be conducted annually with the objective to target 10 percent precision and to achieve 90 percent confidence interval.

ii. **Quality Assurance/Quality Control:**

A Survey questionnaire will be used for seeking the responses from the end-users on the operation of the improved cookstove. And this questionnaire would also seek response on the stove stacking by the users. The survey would be conducted by the project developer. During the survey, in order to anticipate any low response rate and answer bias, 10% oversampling would be done.

iii. **Analysis**

1. Checking of a representative sample of ICS installed every year to ensure that they are still operating.
2. Determination of the wood consumption by project kitchen performance test of a representative sample of all devices, Kitchen performance test would be conducted once in every two year as directed by the applied methodology.
3. Usage of baseline technology
 - The project developer will collect, compile and analyze the data to derive the number of ICS disseminated, the percentage of ICS in operation, displacement of traditional cookstoves. The developer will prepare the monitoring report on the basis of the survey output.
 - The collected will be complied in the excel sheet or other software and analyzed to derive the percentage ICS in operation and wood consumption by the project device using the baseline and project kitchen performance test. These values would be used to determine the emission reductions by the project.

(b) Implementation

- The survey questionnaire will be prepared, pre-tested and field personnel will be trained in conducting the survey to ensure the quality of data received from the survey. The survey for different parameters would be carried out at a specific time interval. The schedule for implementing the sampling effort shall be defined prior to the field activity.

B.7.3 Other elements of monitoring plan

>> **Installation Record**

A comprehensive Installation Record or the distribution record will be in electronic format be backed up electronically. The database will be stored in the local office. Paper records would be of declaration form which will be filled out by CME along with the signature of the cookstove recipients on proper usage.

The installation records will be backed up electronically, with original documentation being stored in the appropriate office for the Project activity.

Project Database

The project database will be derived from the Installation Record, with the project technologies differentiated by the project scenarios (if required).

Installation record

1. User follow up- Address or location, Mobile telephone number and/or landline telephone number (when possible)
 2. End user characteristics- Number of people served by baseline technology, Typical baseline technology usage patterns and tasks (commercial, institutional, domestic, etc.)
 3. Baseline technology and fuels- Types of baseline technologies used and estimated frequency, Types of fuels used and estimated quantities, Seasonal variations in baseline technology and fuel use , Sources of fuels; purchased, hand-collected, or etc., and prices paid or effort made, e.g. walking distances, persons collecting, opportunity cost
- All data collected in relation to the project will be held in the local office of the CME and it would be maintained for the entire life cycle of the project and a additional 2 years afterwards. The data may be archived during the project cycle in order to maintain clarity and security. The end users of the cookstoves are identified and included in the cookstove user list for the duration of the project and updated when required.

Ongoing Monitoring Studies

The following ongoing monitoring studies are conducted for each project scenario following verification of the associated initial project studies.

- a. **Usage survey:** completed annually, or on time of issuance request.
The usage rate provides the information in regards to the drop off rates for the project technology.
- b. **Monitoring Project Survey:** Completed annually, or on time of issuance request.

The project surveys end users using the project technologies to explore changes in the project scenario over crediting period.

c. **Leakage assessment:** annually.

The potential sources of leakage will be investigated ($LE_{p,y}$). if the assessment quantifies an increase in fuel consumption by the non-project households attributable to the project activity, then calculations will be adjusted to account for this.

d. **Non-renewable Biomass assessment update:** reassessed at the renewable of the crediting period

In accordance with the methodology, the NRB assessment will remain fixed for the entire crediting period, although the project proponent may choose to re-examine the assessment at any time.

e. **Project Technologies days:**

The total number of people using each cookstove in the project multiplied by the number of days crediting each cookstove earns in this monitoring period.

SECTION C. DURATION AND CREDITING PERIOD

C.1. Duration of project

C.1.1 Start date of project

>> 28/04/2023, the project is a retro active project. The stakeholder meeting with SFR was held at 20/09/2024 (physical meeting)

.

C.1.2 Expected operational lifetime of project

>> the life time of the Project Activity is 28/04/2023 to 27/04/2028 (both dates included) i.e. for 5 years

C.2. Crediting period of project

C.2.1 Start date of crediting period

>> 28/04/2023

C.2.2 Total length of crediting period

>> 28/04/2023 to 27/04/2028 (both dates are included)

5 year 00 Months (renewable twice)

SECTION D. SUMMARY OF SAFEGUARDING PRINCIPLES AND GENDER SENSITIVE ASSESSMENT

D.1 Safeguarding Principles that will be monitored

A completed Safeguarding Principles Assessment is in [Appendix 1](#), ongoing monitoring is summarised below.

PRINCIPLES	MITIGATION MEASURES ADDED TO THE MONITORING PLAN
Principle 6.1. Labor Rights and Working Conditions	The project will ensure the project employment are in the compliance with National Labor Law ¹⁷ . Also all the employees will be of minimum of 18 years. The project doesn't use, encourage, or promote forced labor, nor does it present a possibility for forced labor. There are no international commitments, ILO agreements, labor or health and safety legislation that the project violates. When it comes to hiring decisions, the project complies with the principles of fair treatment and equal opportunity. There is no national law violation in this project. Child labor is not permitted for this project. There are not enough procedures and safeguards in place at the project to guarantee the health and safety of the workers. The project has put in place enough safeguards and supports to protect migrant workers, young workers, women, and workers with disabilities, as well as to stop any kind of exploitation, abuse, harassment, or bullying, including gender-based violence (GBV). The same is documented in during the monitoring survey for the project and hence in the monitoring report.
Principle 9.5 Hazardous and Non- Hazardous waste	The beneficiaries are informed about the proper waste handling and disposal of ash left from the burning of the woodfuel. There will be no waste material production associated with this project, either hazardous or non-

¹⁷ Indian labor code is provided for the reference. https://labour.gov.in/sites/default/files/labour_code_eng.pdf

hazardous. There is no danger of hazardous material releases as a result of the project's manufacturing, handling, storage, or usage. No chemicals or materials that are subject to international restrictions or phase-outs are used in this project. Waste materials are not produced or managed as a result of the project. Waste material is not treated, destroyed, or disposed of as a result of the project.

D.2. Assessment that project complies with GS4GG Gender Sensitive requirements

Question 1 - Explain how the project reflects the key issues and requirements of Gender Sensitive design and implementation as outlined in the Gender Policy?

The project respects the key gender issues and requirements of gender- sensitive design and implementation of the project. SDG#3 Ensures healthy lives and promote well-being for all at all ages
The project aimed to replace conventional cook stoves with Improved cook stoves. This will result in reducing use of firewood consumption which provide the extra time for livelihood options. Since the primary beneficiaries for the project is women, and time saved from wood collection and cooking, provide them the more avenues for the livelihood options. This project also impact on the SDG – 5, Gender Equality, by which the beneficiaries utilizes the spare time for earning the money.

Question 2 - Explain how the project aligns with existing country policies, strategies and best practices

The project does not involve in any form of based on gender, race, religion, sexual orientation or any other basis as per the country policies¹⁸, strategies and best

practices. The Government of India reaffirms its commitment to work for the realization of constitutional guarantee of equality, social justice and nondiscrimination on the basis of sex, caste, community, language and religion. The project positively contributes towards the national mission for empowerment of women through improvement of health and attaining vision for empowerment of women under national policy for women (Women participation will be ensured in the efficient use and spreading the use of solar energy, biogas, smokeless chulas and other technological applications to have positive influence on their life styles and a long term impact on meeting sustainable development goals)

Question 3 - Is an Expert required for the Gender Safeguarding Principles & Requirements?

No gender expert will be required for the Gender Safeguarding Principles & Requirements, as this requirement is not mandatory.

Question 4 - Is an Expert required to assist with Gender issues at the Stakeholder Consultation?

No gender experts will be present at the Stakeholder Consultation, as this requirement is not mandatory. However, the carbon team, which will be present on the day of the consultation, has extensive experience in conducting this type of meeting, and will follow the Gold Standard Stakeholder Consultation and Engagement Requirements, which includes gender guidelines, and specifies which social groups must be included in the consultation

SECTION E. SUMMARY OF LOCAL STAKEHOLDER CONSULTATION

E.1 Summary of stakeholder mitigation measures

>>

The Local Stakeholder meeting was held on 05/04/2023 but in that meeting only local people were present therefore, a physical Stakeholder feedback round was also organized on 20/09/2024 where all types of stakeholders were invited. The invitations for the same were sent out through emails, and the public notices in English and local language (marathi). The invitations were published and were sent out on 14/08/2024. This ensured that the project adhered to the criteria of giving one-month notice to stakeholders invited. And with same the stakeholder feedback round of 30 days lasting till 20/10/2024 was also initiated and the documents were made publically available. There were no comments received during this phase through email, or WhatsApp or phone call.

The stakeholder feedback round meeting was organized on 20/09/2024 at the venue Community Ground, Village Lalmati, Block Khultabad, District Chhatrapati Sambhaji Nagar (Aurangabad), State Maharashtra. The meeting was organized informally in order to encourage participants post their views on the project more openly and without hesitation of protocol. All kind of stakeholders (Women, Senior Citizens, students, local people etc.) has participated in the meeting.

The method for inviting the local stakeholders involved announcement in the local and public notice, and mails. This was to ensure that all categories of stakeholders are reached including those without the means of internet/email.

During the meeting, the planned project activities were presented to stakeholders and they were invited to make comments and raise questions. A sustainable development and safeguarding exercise was then conducted to solicit the stakeholders' views on any risks within the project and the contributions that it should make to sustainable development. Stakeholders were also consulted on their recommendations for monitoring the project and on the best approach for conducting the continuous input/grievance mechanism.

E.2 Final continuous input / grievance mechanism

METHOD	INCLUDE ALL DETAILS OF CHOSEN METHOD (S) SO THAT THEY MAY BE UNDERSTOOD AND, WHERE RELEVANT, USED BY READERS.
Continuous Input / Grievance Expression Process Book (mandatory)	Continuous input and grievance expression can be directly communicated to the proponent's office in-person. The project local office is located in cluster of villages and then grievance register is also present at the block offices and the main redressal grievance register is kept in the main head office of the blocks of Gangapur, Jamkhed, Karjat, Khultabad, Phaltan` Thus, it is appropriate publicly accessible location at which local stakeholders can provide their feedback on the project. This method is chosen to encompass the stakeholders who wish to physically post their comments/grievances are not acquainted to other means of communication, largely the category A stakeholders.
GS Contact (mandatory)	help@goldstandard.org
Other	Mr Vitthal Bhapkar, the COO of IICARE Foundation is responsible for maintain and addressing any grievance on the project. His mobile number shall be available for any stakeholder to comment. The comments mentioned shall be recorded in the grievance register and shall be processed in line with the procedure Complaints can also be send on the emails given below. Mr. Vitthal Bhapkar COO, IICARE Foundation Mail id: bhapkarvm@gmail.com and Dr. Santosh Bhosale Director, IICARE Foundation Mail id: santoshbhosale@hotmail.com

APPENDIX 1 - SAFEGUARDING PRINCIPLES ASSESSMENT

Complete the Assessment below and copy all Mitigation Measures for each Principle into [SECTION D](#) above. Please refer to the instructions in the [Guide to Completing](#) this Form.

SOCIAL SAFEGUARDING PRINCIPLES		
Reference requirement	Question	Response
P.1 Human Rights		
P.1.1.1 	Does the project developer, its representatives and the Project disrespect internationally proclaimed human rights?	☐ YES ☒ NO
P.1.1.1 	Is the project involved or complicit in violence or human rights abuses of any kind as defined in the Universal Declaration of Human Rights?	☐ YES ☒ NO
P.1.1.2 	Have local communities or individuals raised human rights concerns regarding the project (e.g., during the stakeholder engagement process, grievance processes, public statements)?	☐ YES ☒ NO
P.1.1.3 	Is there a risk that rights-holders (e.g., Project-affected stakeholders) do not have the capacity to claim their rights?	☐ YES ☒ NO
P.1.1.3 	Does this project undermine national or regional measures for the realisation of the right to development?	☐ YES ☒ NO
If the answer to any of the questions above is "yes," please explain the reason and how the project will ensure compliance with applicable requirements. Please add text here...		
Would the project potentially involve or lead to:		
P.1.1.1 	adverse impacts on enjoyment of the human rights (civil, political, economic, social or cultural) of the affected population and particularly of marginalised groups?	☐ YES ☐ POTENTIALLY ☒ NO
P.1.1.2 	inequitable or discriminatory impacts on affected populations, particularly people living in poverty or marginalised or excluded individuals or groups, including persons with disabilities?	☐ YES ☐ POTENTIALLY ☒ NO
P.1.1.3 	restrictions in availability, quality of and/or access to resources or basic services, in particular to marginalised individuals or groups, including persons with disabilities?	☐ YES ☐ POTENTIALLY ☒ NO

P.1.1.3 	exacerbation of conflicts among and/or the risk of violence to project-affected communities and individuals?	☐ YES ☐ POTENTIALLY ☒ NO
---------------------------	--	--

Briefly describe below how the project incorporates a human rights-based approach.

For example, by describing how the project design:

- is informed by human rights analysis, including from UN human rights mechanisms (human rights treaty bodies, universal periodic review, special procedures)
- includes measures to assist the government to realise (respect, protect and fulfil) human rights under international law and to implement human rights-related standards in national law (whichever is higher)
- enhances the availability, accessibility and quality of benefits and services for potentially marginalised individuals and groups, and to increase their inclusion in decision-making processes that may impact them (consistent with the non-discrimination and equality human rights principle)
- provides reasonable accommodations to strengthen inclusivity and accessibility of project benefits and services to persons with disabilities.

[P.2 | GENDER EQUALITY AND WOMEN'S EMPOWERMENT](#)

P.2.1.1 	Have women's groups/leaders raised gender equality concerns regarding the project, (e.g., during the stakeholder engagement process, grievance processes, public statements)?	☐ YES ☒ NO
P.2.1.2 	Does the project undermine the principles of non-discrimination, equal treatment, and equal pay for equal work?	☐ YES ☒ NO
P.2.1.2 	Does the project prevent men and women from having equal opportunities to participate in identified tasks and activities, whether through paid work, volunteer work, or community contributions, as appropriate?	☐ YES ☒ NO
P.2.1.2 	Does the project limit the participation of women or men based on pregnancy, maternity/paternity leave, or marital status?	☐ YES ☒ NO
P.2.1.2 	Is information about project objectives being communicated in a way that is inappropriate for the local context and not tailored to the methods of understanding of both women and men, which could hinder their participation?	☐ YES ☒ NO
P.2.1.3 	Has the project assessed gender risks without referencing the country's gender strategy or equivalent national commitment?	☐ YES ☒ NO
P.2.1.4 	Has expert stakeholder(s) been involved, and has their input been requested for the project design on gender equality and women's empowerment?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain the reason and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project potentially involve or lead to:

P.2.1.1 	adverse impacts on gender equality and/or the situation of women and girls?	☐ YES ☐ POTENTIALLY ☒ NO
P.2.1.1 	exacerbation of risks of gender-based violence? For example, through the influx of workers to a community, changes in community and household power dynamics, increased exposure to unsafe public places and/or transport, etc.	☐ YES ☐ POTENTIALLY ☒ NO
P.2.1.2 	reproducing discriminations against women based on gender, especially regarding participation in design and implementation or access to opportunities and benefits?	☐ YES ☐ POTENTIALLY ☒ NO
P.2.1.2 	limitations on women's ability to use, develop and protect natural resources, taking into account different roles and positions of women and men in accessing environmental goods and services? For example, activities that could lead to natural resources degradation or depletion in communities who depend on these resources for their livelihoods and well-being.	☐ YES ☐ POTENTIALLY ☒ NO

Briefly describe below how the project is addressing any identified risk to gender equality and women's empowerment.

Please add text here....

[P.3 | COMMUNITY HEALTH AND SAFETY](#)

P.3.1.1 	Does the project involve potential risks to the health and safety of affected communities during its life cycle?	☐ YES ☒ NO
P.3.1.2 	Does the project involve any potential risks to the workers' safety and health?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain the reason and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project potentially involve or lead to:

P.3.1.1 	construction and/or infrastructure development (e.g., roads, buildings, dams)?	☐ YES ☒ NO
P.3.1.2 	air pollution, noise, vibration, traffic, injuries, physical hazards, poor surface water quality due to runoff, erosion, sanitation?	☐ YES ☐ POTENTIALLY ☒ NO
P.3.1.2 	harm or losses due to failure of structural elements of the project (e.g., collapse of buildings or infrastructure)?	☐ YES ☒ POTENTIALLY

		☐ NO
P.3.1.2 	risks of water-borne or other vector-borne diseases (e.g., temporary breeding habitats), communicable and noncommunicable diseases, nutritional disorders, mental health?	☐ YES ☐ POTENTIALLY ☒ NO
P.3.1.2 	transport, storage, and use and/or disposal of hazardous or dangerous materials (e.g., explosives, fuel and other chemicals during construction and operation)?	☐ YES ☐ POTENTIALLY ☒ NO
P.3.1.2 	adverse impacts on ecosystems and ecosystem services relevant to communities' health (e.g., food, surface water purification, natural buffers from flooding)?	☐ YES ☐ POTENTIALLY ☒ NO

Briefly describe below how the project is addressing any identified risk related to community health and safety.

Please add text here....

P.4 | CULTURAL HERITAGE, INDIGENOUS PEOPLE, DISPLACEMENT AND RESETTLEMENT

P.4.1 | Sites of Cultural and Historical Heritage

P.4.1.1 	Does the project involve altering, damaging, or removing sites, objects, or structures of significant cultural heritage?	☐ YES ☒ NO
---------------------------	--	--

If the answer to question above is "yes," please explain the reason and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project potentially involve or lead to:

P.4.1.1 	activities adjacent to or within a cultural heritage site?	☐ YES ☐ POTENTIALLY ☒ NO
P.4.1.1 	significant excavations, demolitions, movement of earth, flooding or other environmental changes?	☐ YES ☐ POTENTIALLY ☐ NO
P.4.1.1 	alterations to landscapes and natural features with cultural significance?	☐ YES ☐ POTENTIALLY ☒ NO
P.4.1.1 	adverse impacts to sites, structures, or objects with historical, cultural, artistic, traditional or religious values or intangible forms of culture (e.g., knowledge, innovations, practices)? (Note: projects intended to protect and conserve Cultural Heritage may also have inadvertent adverse impacts)	☐ YES ☐ POTENTIALLY ☒ NO
P.4.1.2 	utilisation of tangible and/or intangible forms (e.g., practices, traditional knowledge) of Cultural Heritage	☐ YES

	for commercial or other purposes?	☐ POTENTIALLY ☒ NO
P.4.1.2 	If answer to question above is "YES" or "POTENTIALLY" - are the communities made aware of their right under the law, scope and nature of proposed development and its potential consequences?	☐ YES ☐ NO ☒ NA
P.4.1.3 	If answer to question above is "YES" - does the project provide equitable sharing of benefits from commercialisation of such knowledge, innovation, or practice, consistent with their customs and traditions?	☐ YES ☐ NO ☒ NA
P.4.1.4 	If answer to question above is "YES" - are opinions and recommendations of an Expert Stakeholder(s) not sought and demonstrated as being included in the project design?	☐ YES ☐ NO ☒ NA
P.4.1.4 	If answer to question above is "YES", has project design been changed, modified, updated considering opinions and recommendations of an Expert Stakeholder?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

[P.4.2 | Forced Eviction and Displacement](#)

P.4.2.1 	Does the project involve any risks related to involuntary relocation of people?	☐ YES ☒ NO
---------------------------	---	--

If the answer to question above is "yes," please explain the reason and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project potentially involve or lead to:

P.4.2.1 	risk of forced evictions or involuntary relocation of people?	☐ YES ☐ POTENTIALLY ☒ NO
P.4.2.2 	temporary or permanent and full or partial physical displacement (including people without legally recognisable claims to land)?	☐ YES ☐ POTENTIALLY ☒ NO
P.4.2.2 	economic displacement (e.g., loss of assets or access to resources due to land acquisition or access restrictions – even in the absence of physical relocation)?	☐ YES ☐ POTENTIALLY ☒ NO
P.4.2.2 	If answer to question above is "YES" or "POTENTIALLY", - has the project developed Resettlement Action Plan or Livelihood Action Plan in consultation and agreement with affected individual, group or community?	☐ YES ☐ NO ☒ NA

	- has the project integrated Resettlement Action Plan or Livelihood Action Plan into the Project design?	
P.4.2.3 	If answer to question above is "YES" - are opinions and recommendations of an Expert Stakeholder(s) not sought and demonstrated as being included in the project design?	☐ YES ☐ NO ☒ NA
P.4.2.3 	If answer to question above is "YES", have project design been changed, modified, updated considering opinions and recommendations of an Expert Stakeholder?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

[P.4.3 | LAND TENURE AND OTHER RIGHTS](#)

P.4.3.1 	Does the project involve any risks related to identifying and managing legitimate tenure rights that may be affected by the project?	☐ YES ☒ NO
---------------------------	--	--

If the answer to question above is "yes," please explain the reason and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project potentially involve or lead to:

P.4.3.1 	impacts on or changes to land tenure arrangements and/or community-based property rights/customary rights to land, territories and/or resources?	☐ YES ☐ POTENTIALLY ☒ NO
P.4.3.1 	uncertainties with regards to land tenure, access rights, usage rights or land ownership? Examples include, but are not limited to water access rights, community-based property rights and customary rights.	☐ YES ☐ POTENTIALLY ☒ NO
P.4.3.2 	Changes in legal arrangements, if yes, are the changes done in line with relevant laws and regulations?	☐ YES ☐ NO ☒ NA
P.4.3.2 	Changes in legal arrangements, if yes, are these changes agree with free, prior and informed consent of the involved stakeholders?	☐ YES ☐ NO ☒ NA
P.4.3.3 	Does some other entity (other than the project developer) hold uncontested land title for the entire Project Boundary?	☐ YES ☐ NO ☒ NA
P.4.3.4 	Are opinions and recommendations of an Expert Stakeholder(s) not sought and demonstrated as being included in the project design?	☐ YES ☐ NO ☒ NA

P.4.3.4	If answer to question above is "YES", have project design been changed, modified, updated considering opinions and recommendations of an Expert Stakeholder?	☐ YES ☐ NO ☒ NA
P.4.3.5	Have project developer in consultation with stakeholders established a functioning mechanism to receive, process, resolve, communicate and record grievances?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

[P.4.4](#) | INDIGENOUS PEOPLES

P.4.4.1	Does the project involve Indigenous People within the Project area of influence who may be affected directly or indirectly by the Project?	☐ YES ☒ NO
-------------------------	--	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project potentially involve or lead to:

P.4.4.1	affect areas where indigenous peoples are present (including project area of influence)	☐ YES ☐ POTENTIALLY ☒ NO
P.4.4.1	affect areas, land and territory claimed by indigenous peoples?	☐ YES ☐ POTENTIALLY ☒ NO
P.4.4.1	impacts (positive or negative) to the human rights, lands, natural resources, territories, and traditional livelihoods of indigenous peoples?	☐ YES ☐ POTENTIALLY ☒ NO
P.4.4.7	If answer to above questions is "YES" or "POTENTIALLY", - Is it determined that the proposed project may affect the rights, lands, resources, or territories of indigenous people? - Has an "Indigenous People Plan" (IPP) or "Indigenous People Plan Framework" been elaborated and included in the project documentation? - Was the plan developed in accordance with the effective and meaningful participation of indigenous peoples and in accordance with UNDP Guidelines?	☐ YES ☐ NO ☒ NA
P.4.4.3	risk of forcibly removing indigenous people from their lands and territories?	☐ YES ☐ POTENTIALLY ☒ NO

P.4.4.4 	utilisation and/or commercial development of natural resources on lands and territories claimed by indigenous peoples? Consider, and where appropriate ensure, consistency with the answers under Principle 4.1 above	☐ YES ☐ POTENTIALLY ☒ NO
P.4.4.5 P.4.4.6 	If answer to question above is "YES" or "POTENTIALLY" - Did the project obtain free, prior and informed consent from indigenous people before taking their cultural, intellectual, religious, and/or spiritual property? - Does the project ensure that the indigenous people receive an equitable sharing of benefits resulting from the use of their traditional knowledge and practices? ? - Does the project ensure that the sharing of benefits resulting from the use of indigenous peoples' traditional knowledge and practices is culturally appropriate and inclusive? - Does the project ensure that the provision of equitable sharing of benefits does not impede land rights or equal access to basic services including health services, clean water, energy, education, safe and decent working conditions, and housing?	☐ YES ☐ NO ☒ NA
P.4.4.8 	Does the project lack appropriate feedback and grievance channels for Indigenous Peoples and their representatives?	☐ YES ☐ NO ☒ NA
P.4.4.8 	Has a grievance mechanism not been established at the beginning of programme or project implementation with due consideration given to customary dispute settlement mechanisms among the Indigenous Peoples concerned and will it remain operational throughout the project cycle?	☐ YES ☐ NO ☒ NA
P.4.4.9 	Are opinions and recommendations of an Expert Stakeholder(s) not sought and demonstrated as being included in the project design?	☐ YES ☐ NO ☒ NA
P.4.4.9 	If answer to question above is "YES", have project design been changed, modified, updated considering opinions and recommendations of an Expert Stakeholder?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

--

P.5 | CORRUPTION

P.5.1.1 	Does the project involve, or is it complicit in, contributing to or reinforcing corruption or corrupt projects?	☐ YES ☒ NO
P.5.1.1 	Does the project have a risk of encouraging bribery, kickbacks, or other unethical behavior?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

ECONOMIC SAFEGUARDING PRINCIPLES

P.6 | ECONOMIC IMPACTS

P.6.1 | LABOUR RIGHTS AND WORKING CONDITIONS

P.6.1.1 	Does the project involve, facilitate, or condone forced labor, or pose a potential risk of forced labor?	☐ YES ☒ NO
P.6.1.1 	Does the project violate any labor or health and safety laws, international obligations, or ILO conventions?	☐ YES ☒ NO
P.6.1.2 	Does the project violate the principles of equal opportunity and fair treatment in its employment decisions?	☐ YES ☒ NO
P.6.1.3 	Does the project violate national laws, if available regarding non-discrimination in employment?	☐ YES ☒ NO
P.6.1.4 P.6.1.5 	Does the project allow child labor?	☐ YES ☒ NO
P.6.1.7 P.6.1.8 	Does the project have insufficient processes and measures in place to ensure the safety and health of project workers?	☐ YES ☒ NO
P.6.1.9 	Does the project have insufficient measures to safeguard and support vulnerable project workers, such as women, people with disabilities, migrant workers, and young workers, and to prevent any kind of harassment, abuse, bullying, or exploitation, including gender-based violence (GBV)?	☐ YES ☒ NO
P.6.1.10 	Does the project have no grievance mechanism available for workers to voice workplace concerns? Is information about this mechanism not provided to workers at the time of recruitment, or is it not easily accessible?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project potentially involve or lead to:

(NOTE: APPLIES TO BOTH PROJECT AND CONTRACTOR WORKERS)

P.6.1.1 	use of forced labour?	☐ YES ☐ POTENTIALLY ☒ NO
P.6.1.1 	working conditions that do not meet national labour laws and international commitments?	☐ YES ☐ POTENTIALLY ☒ NO
P.6.1.1 	working conditions that may deny freedom of association and collective bargaining?	☐ YES ☐ POTENTIALLY ☒ NO
P.6.1.1 	absence of documented working agreements with all individual workers <i>if such agreements do not exist, or do not address working conditions and terms of employment, the project developer shall provide reasonable working conditions and terms of employment.</i>	☐ YES ☐ POTENTIALLY ☒ NO
P.6.1.1 	use of migrant workers? <i>if engaged, the developer shall ensure that they are engaged substantially equivalent terms and conditions to non-migrant workers carrying out similar work.</i>	☐ YES ☐ POTENTIALLY ☒ NO
P.6.1.1 	having no arrangements for basic services ¹⁹ for workers? <i>the project developer shall put in place and implement policies on the quality and management of the accommodation and provision of basic services in a manner consistent with the principles of non-discrimination and equal opportunity. Workers' accommodation arrangements should not restrict workers' freedom of movement or of association</i>	☐ YES ☐ POTENTIALLY ☒ NO
P.6.1.2 	any form of discrimination or harassment based on factors unrelated to job requirements, such as gender, race, nationality, ethnicity, social or indigenous origin, religion or belief, disability, age, or sexual orientation?	☐ YES ☐ POTENTIALLY ☒ NO
P.6.1.2 	any form of discrimination in any aspect of employment, such as recruitment, compensation, working conditions, training, job assignment, promotion, termination, or discipline?	☐ YES ☐ POTENTIALLY ☒ NO
P.6.1.2 	harassment, intimidation, and/or exploitation, especially in regard to women?	☐ YES ☐ POTENTIALLY

¹⁹ Basic services requirements refer to minimum space, supply of water, adequate sewage and garbage disposal system, appropriate protection against heat, cold, damp, noise, fire, and disease-carrying animals, adequate sanitary and washing facilities, ventilation, cooking and storage facilities and natural and artificial lighting, and in some cases basic medical services.

		☒ NO
P.6.1.3 	discriminatory working conditions and/or lack of equal opportunity where national law provides provision to address non-discrimination in employment?	☐ YES ☐ POTENTIALLY ☒ NO
P.6.1.4 	use of child labour? (including third-party engaged workers)	☐ YES ☐ POTENTIALLY ☒ NO
P.6.1.4 	inadequate and verifiable mechanisms for age verification?	☐ YES ☒ NO
P.6.1.7 	no processes and measures in place for the safety and health of project workers?	☐ YES ☒ NO
P.6.1.7 	No provision of safety and health training provisions, including on the proper use and maintenance of personal protective equipment conducted by competent persons and the maintenance of training records?	☐ YES ☒ NO
P.6.1.7 	No provision to record and document accidents, diseases, incidents, and any resulting injuries, illnesses, or deaths?	☐ YES ☒ NO
P.6.1.8 	occupational health and safety risks due to physical, chemical, biological and psychosocial hazards (including violence and harassment) throughout the project life-cycle?	☐ YES ☒ NO
P.6.1.9 	No measures to protect vulnerable project workers from harassment, exploitation, and gender-based violence (GBV)? This includes women, people with disabilities, migrant workers, and young workers.	☐ YES ☒ NO
P.6.1.10 	No grievance mechanism available for workers to voice workplace concerns.	☐ YES ☒ NO
P.6.1.11 	No measures for due diligence and the establishment of policies and procedures to manage and monitor the performance of third-party employees in the project?	☐ YES ☒ NO

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

[P.6.2 |NEGATIVE ECONOMIC CONSEQUENCES](#)

P.6.2.1 	Is there a risk of project failure during implementation or after project certification due to a lack of financial resources?	☐ YES ☒ NO
P.6.2.2 	Does the project have potential negative impacts or pose a risk to the local economy?	☐ YES ☒ NO
P.6.2.2 	Are there any potential risks or negative impacts this project may have on vulnerable or marginalised social groups, despite the benefits it may bring?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here...

Would the project involve or lead to:

P.6.2.2 	economic impacts (negative/detrimental) to the local economy?	☐ YES ☐ POTENTIALLY ☒ NO
P.6.2.2 	negative economic consequences during and after project implementation, e.g., for vulnerable and marginalised social groups in targeted communities?	☐ YES ☐ POTENTIALLY ☒ NO

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

[P.7 | CLIMATE AND ENERGY](#)

[P.7.1 | GHG EMISSIONS](#)

P.7.1.1 	Does the project have a risk of increasing greenhouse gas emissions over the Baseline Scenario?	☐ YES ☒ NO
---------------------------	---	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.7.1.1 	increase greenhouse gas emissions over the Baseline Scenario?	☐ YES ☐ POTENTIALLY ☒ NO
---------------------------	---	--

If the answer is "yes" or "potentially" to the above question, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

[P.7.2 | ENERGY SUPPLY](#)

P.7.2.1 	Does the project pose a risk to the availability and reliability of energy supply to other users?	☐ YES ☒ NO
---------------------------	---	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.7.2.1 	negative impact on the availability and reliability of energy supply to other users?	☐ YES ☐ POTENTIALLY ☒ NO
---------------------------	--	--

If the answer is "yes" or "potentially" to the above question, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

P.8 | WATER

P.8.1 | IMPACT ON NATURAL WATER PATTERNS/FLOWS

P.8.1.1 	Does the project increase water usage to a level that will not allow for the maintenance of environmental flows?	☐ YES ☒ NO
P.8.1.1 	Does the project result in the discharge of wastewater that does not meet the required standard for beneficial reuse and could therefore negatively impact the environmental flow?	☐ YES ☒ NO
P.8.1.1 	Does the project have the potential risk to exceed the rate of recharge for the groundwater source?	☐ YES ☒ NO
P.8.1.1 	Does the project involve any processes or activities that could contaminate the groundwater and render it unsuitable for use?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.8.1.1 	affect the natural or pre-existing pattern of watercourses, groundwater and/or the watershed(s) such as high seasonal flow variability, flooding potential, lack of aquatic connectivity or water scarcity?	☐ YES ☐ POTENTIALLY ☒ NO
P.8.1.1 	Wastewater discharge of quality that does not meet the required standard for beneficial reuse?	☐ YES ☐ POTENTIALLY ☒ NO
P.8.1.1 	significant extraction, diversion of ground water? For example, construction of dams, reservoirs, river basin developments, groundwater extraction	☐ YES ☐ POTENTIALLY

		☒ NO
P.8.1.2 	Are opinions and recommendations of an Expert Stakeholder(s) not sought and demonstrated as being included in the project design?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

P.8.2 | EROSION AND/OR WATER BODY INSTABILITY

P.8.2.1 	Does the project have a risk of negatively impacting the catchment and has it been assessed and addressed?	☐ YES ☒ NO
---------------------------	--	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.8.2.2 	negatively impact on the catchment area?	
-		
P.8.2.5 	<i>If yes, Erosion prevention measures, including soil and slope protection measures, must be implemented before project commencement. These measures should involve natural terracing, infiltration strips, permanent ground cover, hedge and tree rows, and effective slope length assessment. Regular reassessment of these measures is necessary.</i>	☐ YES ☐ POTENTIALLY ☒ NO
P.8.2.6 	Are opinions and recommendations of an Expert Stakeholder(s) not sought and demonstrated as being included in the project design?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

P.9 | ENVIRONMENT, ECOLOGY AND LAND USE

P.9.1 | LANDSCAPE MODIFICATION AND SOIL

P.9.1.1 	Is there any risk of soil resource degradation or loss of ecosystem services provided by soils in the project?	☐ YES ☒ NO
-		
P.9.1.3 		

	<i>If yes, the project shall maintain healthy soils by minimising negative impacts on soil health, productivity, structure, and water retention. Steps to minimise soil degradation include crop rotation, composting, using N-fixing plants, and reducing tillage and ecologically harmful substances.</i>	
--	---	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.9.1.4 	production, harvesting, and/or management of living natural resources by small-scale landholders and/or local communities?	☐ YES ☐ POTENTIALLY ☒ NO
P.9.1.4 	if answer to above question "yes" or "potentially", does project adopt appropriate and culturally sensitive sustainable resource management practices?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

[P.9.2 |VULNERABILITY TO NATURAL DISASTER](#)

P.9.2.1 	Does the project have any risks associated with natural or man-made hazards that could result from land use changes due to the project?	☐ YES ☒ NO
---------------------------	---	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.9.2.2 	any potential risks that require emergency preparedness and response planning?	☐ YES ☐ POTENTIALLY ☒ NO
P.9.2.2 	if answer to above question "yes" or "potentially", did the project developer disclose appropriate information about emergency preparedness and response to affected communities?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

--

P.9.3 | BIOSAFETY AND GENETIC RESOURCES

<u>P.9.3.1 </u>	Does the project involve the transfer, handling, and use of genetically modified organisms/living modified organisms that may result in adverse effects on biological diversity?	☐ YES ☒ NO
------------------	--	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

<u>P.9.3.1 </u>	the transfer, handling and use of genetically modified organisms/living modified organisms (GMOs/LMOs) that result from modern biotechnology	☐ YES ☐ POTENTIALLY ☒ NO
<u>P.9.3.1 </u>	If answer to above question is "yes" has a risk assessment by a competent Expert stakeholder been carried out in accordance with Annex iii of the Cartagena protocol on biosafety to the convention on biological diversity?	☐ YES ☐ NO ☒ NA
<u>P.9.3.2 </u>	If answer to above question is "yes" has any risks identified in the risk assessment?	☐ YES ☐ NO ☒ NA
<u>P.9.3.3 </u>	Forestry (for example Afforestation/Reforestation) involving GMO planting? <i>Note - Forestry projects (for example Afforestation/Reforestation) involving GMO planting are not eligible for Certification under Gold Standard for the Global Goals.</i>	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

P.9.4 | RELEASE OF POLLUTANTS

<u>P.9.4.1 </u>	Does the project have a risk of releasing pollutants to air, water, and land in routine, non-routine, or accidental circumstances?	☐ YES ☒ NO
------------------	--	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.9.4.1 	any potential risk of pollutant release that cannot be avoided?	☐ YES ☐ POTENTIALLY ☒ NO
P.9.4.3 	If answer to above question is "Yes" or "potentially", has the project identified all potential pollution sources that may degrade the quality of soil, air, surface, and groundwater in the project area?	☐ YES ☐ NO ☒ NA
P.9.4.2 	If answer to above question is "Yes" or "potentially", do the pollution prevention and control technologies and practices applied during the project life cycle align with national regulations or international best practices?	☐ YES ☐ NO ☒ NA
P.9.4.3 	If answer to above question is "Yes", is there a monitoring plan to ensure that mitigation measures are implemented, and resources are protected?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

[P.9.5 | HAZARDOUS AND NON-HAZARDOUS WASTE](#)

P.9.5.1 	Does the project involve the generation of waste materials (both hazardous and non-hazardous)?	☐ YES ☒ NO
P.9.5.3 	Does the project involve risk of release of hazardous materials resulting from their production, transportation, handling, storage, or use?	☐ YES ☒ NO
P.9.5.5 	Does the project involve the use of any chemicals or materials subject to international bans or phase-outs?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.9.5.1 	the generation and management of waste materials?	☐ YES ☐ POTENTIALLY ☒ NO
P.9.5.1 	treatment, destruction, or disposal of waste material?	☐ YES ☐ NO ☒ NA
P.9.5.1 	If answer to above question is "Yes", does the project involve an environmentally friendly method that includes appropriate control of emissions and residues resulting from the handling and processing of waste material?	☐ YES ☐ NO ☒ NA

P.9.5.3 	risk of release of hazardous materials resulting from their production, transportation, handling, storage, or use?	☐ YES ☐ NO ☒ NA
P.9.5.3 	If answer to above question is "yes", does project has measures in place to address health risks?	☐ YES ☐ NO ☒ NA
P.9.5.4 	Involve manufacture, trade, and use of chemicals and hazardous materials subject to international bans or phase-outs due to their high toxicity to living organisms, environmental persistence, potential for bioaccumulation, or potential for depletion of the ozone layer	☐ YES ☐ POTENTIALLY ☒ NO

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

[P.9.6 | PESTICIDES & FERTILISERS](#)

P.9.6.1 	Does the project involve the use of chemical pesticides?	☐ YES ☒ NO
P.9.6.5 	Does the project involve purchase, store, manufacture, trade or use products that fall in Classes IA (extremely hazardous) and IB (highly hazardous)	☐ YES ☒ NO
P.9.6.6 	Does the project use fertilisers, and if so, are measures being taken to minimise their use and nutrient losses to the environment?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.9.6.1 	chemical pesticides use for pest management?	☐ YES ☐ POTENTIALLY ☒ NO
P.9.6.4 	If answer to question above is "yes" or "potentially", does project has documented Chemical Pesticides Policy in place?	☐ YES ☐ NO ☒ NA
P.9.6.5 	purchase, store, use, manufacture, or trade in Class II (moderately hazardous) pesticides?	☐ YES ☐ POTENTIALLY ☒ NO
P.9.6.5 	If answer to question above is "yes" or "potentially", does project has appropriate controls on manufacture, procurement, or distribution and/or use of these chemicals?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above questions, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

P.9.7 | HARVESTING OF FORESTS

P.9.7.1	Does the project have a risk of unsustainable forest management, including timber harvesting?	☐ YES ☒ NO
P.9.7.1	Does the project pose a risk of depleting biodiversity and ecosystem functionality in areas where improved forest management is undertaken?	☐ YES ☒ NO
P.9.7.1	Does the project risk not meeting requirements for environment-friendly, socially beneficial, and economically viable plantations using native species whenever possible?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

P.9.8 | FOOD SECURITY

P.9.8.1	Does the project involve the risk of negatively influencing access to and availability of food for people affected?	☐ YES ☒ NO
---------	---	--

If the answer to the question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.9.8.1	modification of the quantity or nutritional quality of food available such as through crop regime alteration or export or economic incentives?	☐ YES ☐ POTENTIALLY ☒ NO
---------	--	--

If the answer is "yes" or "potentially" to the above question, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

P.9.9 | ANIMAL WELFARE

P.9.9.1	Does the project involve any risks to animal welfare?	
	Animal welfare shall be ensured by providing access to water and food, appropriate environment, humane treatment, and staff training. Evidence of mistreatment will be treated as an immediate non-conformity.	☐ YES ☒ NO

P.9.9.2 	Does the project involve any potential risk of excessive or inadequate use of veterinary medicines?	☐ YES ☒ NO
P.9.9.4 	Does the project involve the risk of administering synthetic growth promoters, including hormones?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.9.9.1 	animal husbandry or harvesting of fish populations or other aquatic species? ²⁰	☐ YES ☐ NO ☒ NA
P.9.9.1 	limiting access for animals to basic needs like drinking water, adequate food, daylight, appropriate shelter etc.?	☐ YES ☐ POTENTIALLY ☒ NO
P.9.9.3 	inadequate measures to isolate sick animals and control the spread of disease, especially zoonotic diseases?	☐ YES ☐ NO ☒ NA
P.9.9.5 	inadequate low-stress methods, equipment, and facilities that facilitate calm animal movement.	☐ YES ☐ NO ☒ NA
P.9.9.6 	inadequate measures to ensure that animals are exposed to the least stress possible during transportation and slaughtering?	☐ YES ☐ NO ☒ NA
P.9.9.7 	inappropriate spacing per animal and stocking rates per land unit?	☐ YES ☐ NO ☒ NA
P.9.9.8 	inadequate measures to address the specific needs of aquatic animals?	☐ YES ☐ NO ☒ NA
P.9.9.9 P.9.9.10 	primary production of living natural resources such as animal husbandry, aquaculture, and fisheries? If the answer is yes, implement industry-standard sustainable management practices in line with to one or more relevant and credible standards and utilise available technologies.	☐ YES ☐ NO ☒ NA

²⁰ 'Involve' means if the project mechanism and/or impact(s) are achieved via changing animal husbandry practices in some way.

If the answer is "yes" or "potentially" to any of the above question, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

P.9.10 | HIGH CONSERVATION VALUE AREAS AND CRITICAL HABITATS

P.9.10.1 	Does the project have the risk of negatively impacting HCV areas and/or critical habitats?	☐ YES ☒ NO
P.9.10.2 	Does the project in the project area or area of downstream impacts have risks to the following: native tree patches, individual native trees, freshwater resources (including rivers, lakes, swamps, temporary water bodies, and wells), habitats of rare, threatened, and endangered species, and biodiversity-enhancing areas?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.9.10.1 	identified habitats as HCV areas and or Critical habitats?	☐ YES ☐ POTENTIALLY ☒ NO
P.9.10.1 	If answer to above question is "yes", does the project have any risks that could negatively impact the catchment, project success, and surrounding HCV and ecological assets, as well as any measurable adverse impacts on the criteria or biodiversity values for which the critical habitat was designated, and on the ecological processes supporting that biodiversity?	☐ YES ☐ NO ☒ NA
P.9.10.1 	If answer to above question is "yes", is a robust, appropriately designed, and long-term Habitats and Biodiversity Action Plan absent which will make the project unable to achieve net gains of those biodiversity values for which the critical habitat was designated?	☐ YES ☐ NO ☒ N/A
P.9.10.2 	Does the project area or area of downstream impacts have native tree patches, individual native trees, freshwater resources (including rivers, lakes, swamps, temporary water bodies, and wells), habitats of rare, threatened, and endangered species, and biodiversity-enhancing areas?	☐ YES ☐ POTENTIALLY ☒ NO
P.9.10.2 	If the answer to the above question is "yes", will the project have any adverse effects on these areas?	☐ YES ☐ No ☒ NA
P.9.10.3 	If the answer to above question is "yes", does the project has opportunities to minimise unwarranted conversion or degradation of the habitat and to enhance the habitat as part of its development?	☐ YES ☐ No ☒ NA

P.9.10.4 	Is the project applying Land Use & Forest Activity Requirements and managing a minimum 10% of the project area to protect or enhance the biological diversity of native ecosystems following HCV approach as per the given requirements?	☐ YES ☐ No ☒ NA
P.9.10.5 	Are opinions and recommendations of an Expert Stakeholder(s) not sought and demonstrated as being included in the project design?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above question, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

[P.9.11 | ENDANGERED SPECIES](#)

P.9.11.1 	Does the project lead to the reduction or negative impact on any recognised Endangered, Vulnerable or Critically Endangered species?	☐ YES ☒ NO
----------------------------	--	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.9.11.2 	distortion of habitats of endangered species?	☐ YES ☐ POTENTIALLY ☒ NA
P.9.11.2 	If answer to the above question is "yes", does the project plan to protect and enhance them?	☐ YES ☐ POTENTIALLY ☐ NO ☒ N/A
P.9.11.2 	Are opinions and recommendations of an Expert Stakeholder(s) not sought and demonstrated as being included in the project design?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above question, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

[P.9.12 | INVASIVE ALIEN SPECIES](#)

P.9.12.1 	Does project introduce any alien species (not currently established in the country or region of the project) into new environments?	☐ YES ☒ NO
----------------------------	---	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

P.9.12.1	risk of introducing any alien species with a high risk of invasive behaviour regardless of whether such introductions are permitted under the existing regulatory framework?	☐ YES ☐ POTENTIALLY ☒ NO
P.9.12.1	risk of potential accidental or unintended introductions including the transportation of substrates and vectors (such as soil, ballast, and plant materials) that may harbour alien species.	☐ YES ☐ POTENTIALLY ☒ NO
P.9.12.2	risk of spreading alien species into areas in which they have not already been established?	☐ YES ☐ POTENTIALLY ☒ NO

If the answer is "yes" or "potentially" to any of the above question, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

APPENDIX 2 - CONTACT INFORMATION OF PROJECT DEVELOPER(S)

Organization name	IICARE Foundation
Registration number with relevant authority	377463
Street/P.O. Box	
Building	Tulsi Prerna CHS,LTD – A, 704 Sector – 1, Plot 9.
City	New Panvel, Raigad
State/Region	Maharashtra
Postcode	410206
Country	India
Telephone	9309777900
E-mail	
Website	www.iicare.org
Contact person	Dr. Santosh Bhosale
Title	Director
Salutation	Dr.
Last name	Bhosale
Middle name	
First name	Santosh
Department	
Mobile	
Direct tel.	
Personal e-mail	advisoradt@gmail.com

APPENDIX 3 - LUF ADDITIONAL INFORMATION

Risk of change to the Project Area during Project Certification Period:	NA
Risk of change to the Project activities during Project Certification Period:	NA
Land-use history and current status of Project Area:	NA
Socio-Economic history:	NA
Forest management applied (past and future)	NA
Forest characteristics (including main tree species planted)	NA
Main social impacts (risks and benefits)	NA
Main environmental impacts (risks and benefits)	NA
Financial structure	NA
Infrastructure (roads/houses etc):	NA
Water bodies:	NA
Sites with special significance for indigenous people and local communities - resulting from the Stakeholder Consultation:	NA
Where indigenous people and local communities are situated:	NA
Where indigenous people and local communities have legal rights, customary rights or sites with special cultural, ecological, economic, religious or spiritual significance:	NA

APPENDIX 4 - DESIGN CHANGES

A4.1. Details of proposed or actual design change

>>

NA

A4.2. Describe the impacts of design change on the following

a. Additionality

>> NA

b. Applicability of methodology and other methodological regulatory documents with which the project activity has been certified

>> NA

c. Compliance with the monitoring plan of the applied methodology

>> NA

d. Level of accuracy and completeness in the monitoring of the project activity compared with the requirements contained in the registered monitoring plan

>> NA

e. Scale of the project activity

>> NA

f. Stakeholder consultation

>> NA

g. Sustainable development criteria

>> NA

h. Safeguarding assessment

>> NA

i. Compliance with applicable legislation

>> NA

j. Only for LUF Projects: Transparent summary of all approved changes in Project Area, Eligible Area and accompanying changes in ex-ante emissions removals.

This project is not LUF Project

DATE OF APPROVED DESIGN CHANGE (MM/DD/YYYY)	PROJECT AREA (HA)		ELIGIBLE AREA (HA)		EX-ANTE ESTIMATE (TCO2E)	
	INCREASE OR DECREASE ?	VALUE (HA)	INCREASE OR DECREASE?	VALUE (HA)	INCREASE OR DECREASE ?	PERCENTAGE (%)

DOCUMENT HISTORY

Version	Date	Remarks
1.5	29 June 2023	Editorial changes to match V2.1 of the Safeguarding Principles Requirements
1.4	21 June 2023	Editorial changes to match V2.0 of the Safeguarding Principles Requirements
1.3	14 April 2023	Integrated the design change memo as annex of the document. Editorial changes
1.2	14 October 2020	Hyperlinked section summary to enable quick access to key sections Improved clarity on Key Project Information Inclusion criteria table added Gender sensitive requirements added Prior consideration (1 yr rule) and Ongoing Financial Need added Safeguard Principles Assessment as annex and a new section to include applicable safeguards for clarity Improved Clarity on SDG contribution/SDG Impact term used throughout Clarity on Stakeholder Consultation information required Provision of an accompanying Guide to help the user understand detailed rules and requirements
1.1	24 August 2017	Updated to include section A.8 on 'gender sensitive' requirements
1.0	10 July 2017	Initial adoption
